Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

Please deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I strongly urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

As a young person whose family has already faced the consequences of worsening hurricanes due to climate change, I am incredibly passionate about making sure our government does everything in its power to counteract the worsening of climate change. This wood pellet facility is fundamentally counterproductive and unjust.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I insist the SC DHEC deny any and all permits for the expansion of the wood pellet industry in South Carolina. Immediately address the environmental justice damages this proposal in Effingham, South Carolina will inflict if approved. It is the job of the DHEC to honestly and accurately assess the risks and harms that this proposed facility will have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents.

I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs)--all dangerous to human health. The communities of Effingham and Florence County have already been disproportionately harmed by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Let me interject an anecdote here. Many years ago, Europeans first set eyes upon this continent. At that time, much of the forest that had covered Europe had been exhausted for construction and fuel. The eyes of these first Europeans opened wide. Here were acres upon acres of forest, as far as the eye could see. Resources for tree-exhausted Europe. What has happened since? Vast forests have been cut down for construction and fuel, here and in Europe. This is still going on; the wood pellet industry takes our forests and turns them into fuel for Europe. Are we really as smart as we think we are??

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

I do think anyone in government or corporations remember that the forests and plants provide the oxygen that we need in order to survive. You need to be seeking out other ways, such as recycling all the woods that are ending up in the land fills.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. The following actions will support the continued good effects of our forested areas and benefit the health and well-being of all living things.

Therefore, I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Deny Effingham Pellets' Air Permit and Stop the Proposed Wood Pellet Mill in Effingham, SC

Tuesday, June 8, 2021 1:35:52 PM

---

\*\*\* Caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. \*\*\*

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[Redacted Signature]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

Effingham Pellets LLC is a wood pellet manufacturer and distributor that supplies wood pellets for export sale to \*Europe\*. The environment of the proposed mill needs to be carefully studied. This is an environmentally sensitive area which needs careful planning.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

We MUST start protecting our precious environment.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I urge SC DHEC to DENY ANY EXPANSION of the WOOD PELLET INDUSTRY IN SOUTH CAROLINA and to IMMEDIATELY ADDRESS THE ENVIRONMENTAL JUSTICE IMPLICATIONS OF THE PROPOSAL in Effingham, South Carolina. I URGE DHEC TO DEEPLY ADDRESS THE ENVIRONMENTAL ISSUES this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I CALL ON THE BUREAU OF AIR QUALITY TO:

- DENY Effingham Pellets LLC's AIR PERMIT APPLICATION TO BEGIN TO ITS production in its proposed mill.
- WE MUST HAVE A Complete a full Environmental Justice Report.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

As a Professor of Forest Ecology, who has studied the growth and recovery of forests in the Southeast United States for over two decades, I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

The cutting of South Carolina's forests to fuel power plants in Europe is a wasteful and short-sighted use of our natural resources. It will benefit only a few, and represents an economical dead-end for the state. Many European countries have realized that wood pellets are not a sustainable energy source, as the demand for pellets far exceeds the rate of forest re-growth. The Netherlands and Denmark have decided to phase out pellet burning power plants as soon as possible, and the rest of European Union is considering the same. In addition, this proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the air, affecting surrounding communities. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Instead, forest landowners and industry stand to gain from joining new initiatives like the Ecosystem Services Market Consortium (<https://protect2.fireeye.com/v1/url?k=a77ec093-f8e5f98c-a77e1562-8630ffab37ab-5966f78acaba3301&q=1&e=78defe25-b562-4790-bbc9-692805e1ceb5&u=https%3A%2F%2Fecosystemservicesmarket.org%2F>) established by major agricultural producers. This consortium is currently developing a baseline database that can be used to develop economic valuation for soil carbon. Increasing this critical resources through "regenerative agriculture" ensures that the lands maintain their productivity for years to come. Furthermore, the producers have committed to paying the premium for activities that protect and sustain the productivity of agricultural soils. With forests holding much more carbon, and providing a myriad of other ecosystem services (like providing clean air and water, buffering hydrological extremes, and supporting biological diversity that humankind relies on, to name a few) they are prime candidates to joining and benefiting from the Ecosystem Services Market Consortium. This path will provide much longer-lasting environmental and economical benefits to involved parties.

I urge you to consider the limited and short-lived benefits of the planned pellet mill in comparison to alternative uses and benefits from South Carolina's forests to both landowners, forest industry more broadly, and the state as a whole.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I urge the SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. DHEC needs to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Forcing South Carolina residents to subsidize this wood pellet facility is wrong, especially since it brings only 10 jobs to the local economy, if that, and does not contribute to the local economy otherwise. As you are well aware, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Once again, I urge you to deny this permit. Thank you.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am a resident of South Carolina who is passionate about protecting our environment from negative impacts. Hence, I am deeply concerned about any expansion of the wood pellet industry. We absolutely must take steps to protect and defend our biodiversity and our forests in order to protect the environment for us all.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]
