This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

We very strongly urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. For way too long woodlands in this area have been cut down to make wood pellets , most of which are sent to Europe!! Pictures of this area look like a tornado had gone through!!! Vital forest that protect water resources and those what protect wildlife habitat have been clear cut!! We urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. We ask DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. The DHEC must address the impacts that this proposed facility would have on the climate, South Carolina forests, biodiversity, and the health and well-being of residents. DHEC must:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

If this company wants to make pellets, tell them to start recycling all the wood that goes into the landfills every day instead of cutting down forests that are needed to clean the air and provide us with oxygen.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing from Britain to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity - including the fauna who depend on the trees - , and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to DENY any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to ADDRESS THE IMPACTS that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and DOES NOT CONTRIBUTE TO OUR ECONOMY otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new WOOD PELLET MILL WILL FURTHER DEGRADE OUR CLIMATE, ECOSYSTEM, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

My husband is from South Carolina and his whole extended family is there. We are planning on moving back to South Carolina, but it must be a healthy environment and full of trees. My husband proposed to me in a South Carolina forest, and it excites me to go back. However, the environment must be healthy for my husband and I to do that.

There are no benefits to South Carolina nor to the United States. The wood pellet facility would just destroy our environment for the purpose of a corporate greed.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am very concerned about the biofuels industry and its impact on essential forest cover and the environment. The loss of trees has a catastrophic effect on many things: the production of oxygen, the sequestration of carbon dioxide and the Earth's hydrological cycle, not to mention the living things which depend on healthy forests to grow. All these harmful impacts make the climate crisis much worse.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in bed or in a grave.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about not just checking a box.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we just lie in bed or in a grave.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to protect our health?

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs.  Nobody else can make all the money  bed or in a grave.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at  the bed or in a grave.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sitting in the bed or in a grave.

Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money

ed or in a grave.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money in the bed or in a grave.

These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our lungs and cough in the bed or in a grave.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

## Comment

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

If you don't care about trees being cut down along the Pee Dee River, and people getting flooded and losing their homes, mold, and all of that then what is your environmental protection supposed to be for to the people in South Carolina. If all you're going to do is measure how much pollutants the plants put out, while so many people are experiencing more and more flooding, shouldn't somebody else be approving these permit. We need somebody who cares about everything from the community and not just checking a box.

## Comment

I'm sending this comment, and I hope somebody from DHEC will get back with me. I live in an area that floods, all of the time. It's not too close to the plant's location, but it is close enough to feel the effects and it floods all the time.

There's so many people in the Pee Dee area where they're cutting down trees in places that floods all of the time. I'm talking about a mile from the Pee Dee River. I've had to leave my home as well as other people because of flooding in Brittons Neck and in other places. We had to leave three times! It's horrible when we can't get out of our homes and roads are closed.

I have a question for DHEC, these people with these pellet plants are cutting down trees and it makes the flooding worse. A mile from the river in the community I live in the flooding is worse! Why, if you supposed to be taking care of the environment, where trees are considered a part of the environment, do it seems you have no human concern.

I am writing this, but I want to be able to be at the hearing, so that I can read this and let everyone know that I do not think the Effingham Wood Pellet plant should be built.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money

## Comment

I am sending this comment to South Carolina Department of Health and Environmental Control (DHEC) because I do not think that the Effingham Wood Pellet Plant should be built in our community.

I have people in my family who have problems with asthma and other respiratory conditions. I do not believe that we need a Pellet Plant that is going to make our people sicker.

Why can't this plant be put in another area? Why must it always be put in Black people neighborhoods?

Why can't it be put somewhere else where people do not live around it. If DHEC knows there may be a problem with it, and there may be a problem because otherwise they would not have to get permission for it to be built. If you know that there may be a problem, why are you putting this in a community where people can be sick or may die.

I do not understand why when there are so many people dying and sick in the hospital from COVID would you have a plant built that might impact people's health even more.

We closed everything during COVID and some businesses are still not fully opened, and if we could shut down stores, restaurants, schools, churches, and stadiums where they have sporting event, oh my God, we can do anything we want to do.

We shut down almost everything in America, including federal buildings, even airports from taking people. COVID is still out here and people are still getting it. Why, why can't you put this plant on hold?

Why must it be built now, while COVID is still running? Wow. I do not understand! Are you the Department of the Environment and Health, or are you the Department of helping businesses pollute the environment? Are you an agency that is supposed to care about our health?

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

JUNE 19, 2021

I understand that there are all kinds of articles out there, *New York Times*, and the 200 scientists' letter to Congress. And there's all this talk about how these wood pellet plants are not good for communities, they're not good for health, and they're not good for the environment. I can't believe that only 10 jobs will be available to hire local community members. They're not likely going to hire people who don't know how to do this type of work.

So how many people are they going to bring in from their headquarters to fill these 10 positions. How many of those 10 jobs are not going to people in the community? These same people in the community who are going to have to listen to the noise from the plant. They're going to have to smell the diesel fumes from the trucks. They are going to have to see the pieces of bark and dust flying off in the air, and they're breathing in all of this.

I just don't understand, DHEC do you take into account what happens to the environment, people's health, or is it all about money, and a couple of jobs that people in the community *may* get. This is why I don't want this plant, because the science is out. It's not good!

DHEC, if you're just going to check off boxes and go along with what the regulations say, and you're not really figuring out how much people are going to suffer and be hurt. Can you really tell us how much pollution is coming in the air from the trucks, as well as what's coming from the plant? Because if you can tell us all of that, then you don't really know what the environmental impacts are going to be. You don't really know how much we're going to be suffer and be hurt, just to obtain a few jobs so that somebody else can make all the money while we look at our loved ones sick in the bed or in a grave.

Hello,

I have attached a public comment for submission on the Air Permit Application filed by Effingham Pellets LLC in Florence County. This statement is on behalf of Dogwood Alliance.

Thanks for your consideration!

--

[REDACTED]  
*Outreach and Community Engagement Fellow*  
*Dogwood Alliance*

Dogwood Alliance is writing to urge the South Carolina Department of Health and Environmental Control (SC DHEC) to deny the air permit request filed by Effingham Pellets LLC (a subsidiary of Charles Ingram Lumber Co.) to begin wood pellet production in Florence County. It is imperative for DHEC to deter expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposed facility. We urge DHEC to address the impacts this facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of impacted residents. Specifically, we call on leaders and DHEC to:

- **Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.**
- **Ask for a complete Environmental Justice Report on the future impacts of the proposal.**

## **Environmental Justice Impacts**

Similar to other wood pellet production facilities in South Carolina, the proposed plant is located in a vulnerable community, raising significant environmental justice issues. Florence County's population is about 42.3% Black or African American. Meanwhile, its population has relatively high poverty rates —especially its youth, with around 25% of those under 18 living below the poverty line. The disproportionately impoverished youth of

Florence County will suffer from the proposed plant's impact on the air, the long term climate impacts of carbon-intensive energy sources, and deforestation, and at the same time, won't benefit economically—the project is projected to **only bring ten jobs** to the region, with Effingham alone having a population of over 11,000 people.

Further, **the COVID-19 crisis has immensely affected predominantly BIPOC (Black, Indigenous, and People of Color) communities across the South.**

Florence County has a lower vaccination rate than the nation on average and has also experienced more cases per capita throughout the pandemic than the country at large. This community, already disproportionately impacted by COVID-19, a respiratory disease, must not be subjected to more air pollution and harmful emissions. Wood pellet mills, including this proposed one, release particulate matter, hazardous air pollutants, volatile organic compounds, and more into the air, all of which contribute to higher risk of lung disease, lung cancer and other respiratory illnesses and generally weaker immune systems.

Lastly, the community must be granted a say in these processes—the almost entirely white County Council does not allow open public comment periods on issues that are not present on the agenda, and has denied opportunities for community members to add the air permit issue to council meeting agendas;

the Council has, however, granted Effingham Pellets LLC special source revenue credits. In other words, while the County Council has provided benefits to the company, it has denied its constituents whom it represents the chance to have their voices and concerns heard.

## **Climate Impacts**

Dogwood Alliance urges the SC DHEC to consider the impacts this facility's production will have on South Carolina's forests, the state's ability to be resilient in the face of **increasing storms and hurricanes**, and our commitment to reduce carbon emissions. While climate action is a top priority for communities that are facing climate impacts, dirty industries continue to expand, and protections for forests and communities fall short. Wood pellet production is carbon-intensive, leads to higher pollution in production areas, and removes forests that store and sequester carbon.

Effingham Pellets LLC is applying for an air permit that would allow them to build a mill which would produce an estimated 43,800 metric tons of wood pellets per year. This means that 1051 acres of our beautiful, essential forestry would be cut down each year, nearly 3 acres every single day. This process will produce about 94,343 tons of carbon dioxide emissions annually, the equivalent of an additional 18,171 cars on the roads *every year*.

Many forms of biomass—especially from forests—produce higher carbon emissions compared to fossil fuels. In particular, a growing body of peer-reviewed, scientific studies shows that burning wood from whole trees in power plants to produce electricity can increase carbon emissions relative to fossil fuels for many decades—anywhere from 35 to 100 years. This time period is significant: the Intergovernmental Panel on Climate Change made it clear that the coming decade is crucial and requires dramatic short-term reductions in greenhouse gases. The emissions from biomass will persist in the atmosphere well past the time when significant reductions are needed.

## **Forest & Wildlife Impacts**

Global demand for wood pellets is devastating forest ecosystems in the Southeast United States. Biomass facilities acknowledge that they harvest from wetlands, highly diverse habitats with many threatened mammal, reptile, amphibian, and bird species. Despite the claims of the wood pellet industry, independent reporting shows a disturbing pattern: wood pellets often are sourced from wood that is harvested from native hardwood forests in an area designated as a global biodiversity hotspot. Demand for softwood and pine plantations is also having a negative impact on forests, the climate, and biodiversity. Since 1953, the government has used various programs to pay landowners to plant pine instead of allowing natural forests to grow. As a

result, we've lost over 35 million acres of natural forest and gained over 40 million acres of pine plantation instead. In addition, **industrial tree plantations pose a serious threat to South Carolina's climate change resiliency** because they make the effects of floods, droughts, heat waves, storms, and disease more severe.

## **Conclusion**

If Effingham Pellets LLC is granted this permit, it will have impacts on the health of local residents, the ability of natural ecosystems to support greater resiliency to storms and hurricanes, and contribute to global carbon emissions at a time when community health and safety rely on cutting those emissions. The facility will not even bring economic benefits to the community in which it will be built—once again, it is projected to only create 10 jobs in the region. Affected residents deserve a seat at the table in all discussions regarding this permit and the opportunity to be informed about its consequences. **We reiterate our request for SC DHEC to ask for a full Environmental Justice Report and to ultimately deny the requested air permit.**

Thank you for the opportunity to comment,

*Dogwood Alliance*

Dear Bureau of Air Quality Public Notice Coordinator,

I live among Southern forests and I know how important they are for combatting global climate change. Don't cut them down for Europeans to fool themselves into thinking that they are being "environmentally responsible". That is a lie.

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

\*\*\* Caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. \*\*\*

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

This, like numerous other issues (climate change, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

**Subject:** Public Comment: DHEC should Deny Air Permit and Stop Pellet Mill Project in Florence County  
**Date:** Friday, June 11, 2021 6:01:36 PM

---

\*\*\* Caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. \*\*\*

Hello,

My name is [REDACTED] and I am a resident of South Carolina. I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents.

I call on DHEC to:

1. Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
2. Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been **disproportionately impacted** by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project. South Carolina residents would be subsidizing this wood pellet facility, all the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise, as we know there is not a market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Here are several reasons why I oppose this expansion:

- Effingham Pellets LLC would destroy trees and worsen flooding in the area. Trees are the first natural defense against flooding.
- These facilities pollute our air!
- There is no market for wood pellets in the US! They are exported for profit. That's an **EXTRACTIVE economy** preying upon South Carolinians.
- The Effingham community has 11,000 people. This facility would create 10 jobs and likely less than that for local residents.
- Trees clean our air and water.
- South Carolina residents are subsidizing this wood pellet facility, all the while it brings only 10 jobs to our local economy, if that, and does not contribute to our

economy otherwise.

- Effingham Pellets LLC claims that Charles Ingram, a partial owner, has good relationships in Effingham. This is not true!
- The company expects that the operation of the pellet plant will reduce truck traffic in the neighboring area. We know from many other communities in the southeast that the opposite is true!

Effingham Pellets LLC is not facility that we need in our community and would go against the mission of the department to protect public health and serve the people. Thank you for the opportunity to comment on this permit.

Yours Truly,

A solid black rectangular redaction box covering the signature.

Dear Bureau of Air Quality Public Notice Coordinator,

Have you ever admired a butterfly fluttering over wet moss? Or rested among trees that carry more wisdom than your great great-grandmother? Or listened, truly listened, to the sound of water peacefully folding around ancient rocks? If so, then you would agree, South Carolina forests hold beauty, harmony, and joy in their purest forms.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

If you don't take action, lungs will be filled with toxic pollutants and dust. This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

What's worse, South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard.

We, as humans, need forests - we rely on their bio-diverse eco-systems to survive. Forests support natural carbon sinks to mitigate global climate change; land currently sinks 24% of carbon, and this is vital as 59% of emissions are still staying in our atmosphere, resulting in rapid climate change (1). If we continue on this path, our actions will ultimately lead to a mass extinction, the sixth known extinction in earth's history (2). We cannot pretend that earth will somehow exempt us from this pattern - earth will not be bribed with the profits we have gained from destroying it.

These projects affect everyone, every human and life-form on this planet, and they hurt surrounding communities and eco-systems the most. Act now - deny Effingham Pellets LLC's air permit application and complete a full environmental justice report. We cannot turn a blind eye to this - the biomass industry is stripping thousands of acres of southeastern forests per year (3), burning its trees for fuel and degrading its valuable resources down to nothing, but ash. The forests, the communities affected, have no fighting chance.

Hope lies with leader like you - we are all counting on you. Please protect us and our future - even if at this moment, it feels like the uncomfortable choice. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit, and thank you for your service.

Hello,

I spoke last night at the Public Hearing for Effingham Pellets LLC's Air Permit Application, but I also wanted to submit my comment in writing. [REDACTED] and I have also attached it as a PDF.

Thanks!

--

[REDACTED]  
*Outreach and Community Engagement Fellow  
Dogwood Alliance*

Hello,

My name is Robby Phillips. I am 20 years old, a student of environmental science and policy, and I am deeply concerned about the air permit submitted by Effingham Pellets LLC and their proposed wood pellet mill in Florence County. **I am asking you to please deny this air permit and prevent the expansion of the wood pellet industry in South Carolina.**

My teenage years have been defined by natural disasters, crises of air and water quality, and dire warnings about the future of our climate and our planet. I've seen friends' homes in California put in peril by wildfires and flood waters surrounding my grandparents home after extraordinary hurricanes. I have learned extensively about the devastation that will come if we do not act swiftly to curb greenhouse gas emissions worldwide.

This proposed mill will produce over 40,000 tons of pellets each year, amounting to 3 more acres of our forests being cut down *every single day*. It will produce carbon emissions equivalent to an additional 18,171 cars on the road every single year. Despite claims by industry proponents, including many of whom on this hearing have misrepresented the science and data, wood pellet and biomass energy sources are not clean and climate friendly, but in fact severely exacerbate the climate crisis from the beginning to the end of harvesting, producing, and burning the pellets.

In addition to the catastrophic impacts projects like this one proposed by Effingham Pellets LLC will have on our climate, the air we breathe will be significantly impacted by particulate matter, volatile organic compounds, and more, which will contribute to high rates of asthma, lung disease, and lung cancer found in communities which live near facilities like that in the proposal. While nothing would make these devastating impacts on our health and futures' worth it, this proposal especially will wreak havoc on the surrounding community with no meaningful tradeoff. It is projected to only produce about TEN jobs in the Florence County region—this proposal will enrich a few executives at the expense of our health and lives.

It is imperative for *all* of our futures that we do not expand carbon-intensive energy sources any more, which *includes Biomass*. The stakes are too high—the IPCC has already warned that we must cut emissions in half by 2030 to avoid climate catastrophe, and we have hardly made progress towards this target. Wood pellet mills like these will only push us further off track, while further harming already vulnerable communities.

For the health and well-being of all the members of the Florence and Effingham community and for all of our futures, **please deny the air permit requested by Effingham Pellets**

**LLC and prevent further expansion of the harmful, destructive wood pellet industry in South Carolina.**

Thank you for the opportunity to comment.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Regarding the Effingham pellet plant. I had opposed the plant but my thinking has changed and that since this is a small plant using residue from the existing mill that it is not the problem I had thought it would be. I oppose the large pellet plants that are harvesting whole trees for pellets. That has been shown not to be carbon neutral as the proponents suggest.

Thank you,

I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

If this company wants to make pellets, tell them to start recycling all the wood that goes into the land fills every day instead of cutting down forests that are needed to clean the air and provide us with oxygen.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

My husband is from South Carolina and his whole extended family is there. We are planning on moving back to South Carolina, but it must be a healthy environment and full of trees. My husband proposed to me in a South Carolina forest, and it excites me to go back. However, the environment must be healthy for my husband and I to do that.

There are no benefits to South Carolina nor to the United States. The wood pellet facility would just destroy our environment for the purpose of a corporate greed.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

Biomass energy is not a climate change solution and will not create enough jobs to offset the negative impacts to human health and to our environment.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am very concerned about the biofuels industry and its impact on essential forest cover and the environment. The loss of trees has a catastrophic effect on many things: the production of oxygen, the sequestration of carbon dioxide and the Earth's hydrological cycle, not to mention the living things which depend on healthy forests to grow. All these harmful impacts make the climate crisis much worse.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Good afternoon:

I am writing to protest approval of the construction permit for Effingham Pellets LLCt. While it may seem like this industry creates jobs and is an asset, it has the potential to do harm to our state, our local communities, our people and our future. Though touted as a clean, environmentally safe alternative to fossil fuels, wood pellets are a carbon-intensive, destructive and polluting industry based on a flawed carbon accounting system.

This industry is not largely using scrap lumber but instead cuts down carbon absorbing mature forests to make pellets that are then burned mostly in Europe where it is touted as 'renewable energy'. In fact, wood pellets are **not** renewable because they not only eliminate needed carbon absorbing trees, but when those pellets are burned they release 65% more carbon into the air per megawatt than coal.

Cutting down forests can also create other community problems such as flooding and run-off, especially in adjacent neighborhoods. In addition the manufacturing process itself is a health hazard due to the use of toxic chemicals and the releasing of fine dust into the air that can harm local ecosystems, our children and at risk adults.

Expanding the wood pellet industry in South Carolina is a huge mistake. I request that you do not approve the Effingham Wood Pellets LLC construction permit.

Thank you, [REDACTED]

DHEC Board,

I urge you to ponder if you would want to take the risks and raise your children in this community. Would you want your wife to be pregnant in this community with an operating plant knowing that VOCs and HAPs pass through the umbilical cord blood. What is the acceptable level of fetal damage that you would risk with your children? What does the EPA data suggest regarding these concerns?

What is the effect on people who have respiratory problems or are immunocompromised?

This plant increases greenhouse gases!

Other forms of providing energy are far more efficient.

When the winds blow toward Florence, another 70,000 will be effected.

This plant externalizes the risk for the sake of corporate profit—The only clinical psychological term for this behavior is pathological.

Please reconsider.

[REDACTED],

Please do not grant the Air Permit for the Effingham Wood Pellet Facility. Although the plant purports to be in compliance for particulate matter and toxic materials, until the companies' owners have created and have had approved their BMP's for fugitive dust control, the plant cannot be considered compliant. A declaration that compliance has been met in this area is premature, a putting of the cart before the horse. Best Management Practices must be included to ensure the neighboring communities and the workers are protected.

Data about the communities' demographics and locations relative to air and wind movement of emissions and dust must be considered in the light of possible health outcomes for the future. The closest community is an African American in make-up. In the light of the ongoing COVID-19 pandemic, DHEC must consider comorbidities in the community. Air emissions from the plant should be much lower than the ambient air quality standards because COVID-19 attacks the respiratory system. and people with existing health problems have lowered immunity to COVID-19. Any additional burden upon the respiratory system creates a more critical and even deadly situation. A community health study should be conducted and analyzed in order to determine whether or not the emissions from the facility will impact the community's health.

Finally, there should be a bond or a financial savings account created by the company(ies) for the purpose of adding protections such as additional filters and necessary improvements in case of failures of the fugitive dust plans.

Please ensure the owners complete these tasks. Then and only then should the application for an air permit be considered. People's lives are at stake.

[REDACTED]  
South Carolina resident and citizen

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

\*\*\* Caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. \*\*\*

Do not grant the Air Permit for the Effingham Wood Pellet Facility. Although the plant purports to be in compliance for particulate matter and toxic materials-until the companies' owners have created and have had approved their BMP's for fugitive dust control, the plant cannot be considered compliant.

An African American community is in the near vicinity of the Effingham Wood Pellet facility .

Air emissions from the plant should be much lower than the ambient air quality standards because COVID-19 attacks the respiratory system. and people with existing health problems have lowered immunity to COVID-19. Any additional burden upon the respiratory system creates a more critical and even deadly situation. A community health study should be conducted and analyzed in order to determine whether or not the emissions from the facility will impact this African Americans' community's health.

Sincerely ,

Dear SC DHEC,

Please see below for the names of people that support the following statement. Please let me know if you have any questions.

I urge the South Carolina Department of Health and Environmental Control to deny the Effingham Pellets LLC Minor Source Air Permit application, a permit for processing dry shavings from lumber mills and producing wood pellets in Effingham, South Carolina. In the midst of a health crisis exacerbated by environmental pollution, our elected officials and Department of Health and Environmental Control need to be thinking about how to build back equitably and sustainably. This application does not do that. Granting the Minor Source Air Permit would extract resources from our communities that currently protect us from air pollution and flooding. A wood pellet plant is also a known polluter and no community should have its own air quality compromised. South Carolina residents would be subsidizing this wood pellet facility, all the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise as we know there is not a market for wood pellets in the United States. Effingham Pellets LLC claims in their application that Charles Ingram, a partial owner of the company, has good relationships in Effingham. This is not true. The company also expects that the operation of the pellet plant will reduce truck traffic in the neighboring area. We know from many other communities in the southeast burdened by wood pellet facilities that the opposite is true. This is not a facility that we need in our community and would go against the mission of the department to protect public health and serve the people. I urge you to deny this permit today and serve the people of South Carolina, as you have taken an oath to do. Thank you for the opportunity to comment.

Dear Bureau of Air Quality Public Notice Coordinator,

I have lived in Columbia, SC, for one year.

I was born, raised, and lived in Williamsburg Co. my entire adult life (previous to the move to Columbia).

I was an Adult Education teacher at Effingham Detention Center for 9 years.

Please stop the despoiling rural SC. Tourists come here for the woodlands, for the fishing.

Clean water is one of our most valuable resources...a resource that many states are missing: bottled water for many citizens is the only clean water.

Yes, we need jobs. However, every person needs clean water to live; every person needs clean air (filtered by trees) to breathe.

I call on DHEC to

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
Mr. Timmie Smith

Greetings,

Please find attached and inserted below my comment submission regarding the Effingham Pellets air permit.

### **USIPA Comments for Effingham Pellets Permit**

My name is [REDACTED] and I'm the Vice President of Communications for the US Industrial Pellet Association.

USIPA is a not-for-profit trade association based in Richmond, Virginia that promotes sustainability and safety practices within the US wood energy industry. Our membership includes large-scale producers of sustainable wood biomass fuel across the Southeast.

As you consider the permit application for Effingham Pellets, I would like to emphasize that the world's leading scientific institutions and real-world data confirm the positive benefits of wood biomass for the climate, our environment and rural economies like Effingham.

According to the world's foremost climate experts, wood bioenergy limits global warming by replacing fossil fuels and keeping our forests intact.

This is the conclusion of the UN Intergovernmental Panel on Climate Change (IPCC), which is widely considered **the** global authority on climate science. The IPCC makes clear that forests and forest products have an essential role to play in mitigating climate change.

In its August 2019 [Special Report](#) on Land and Climate, the IPCC indicated that bioenergy and sustainable forestry are essential solutions in keeping the Earth's warming below the critical threshold of 1.5C. Specifically, the IPCC stated that sustainable forest management "aimed at storing carbon while yielding timber, fiber, and **bioenergy**" will produce the best results for the climate.

Wood biomass fuel also benefits the environment by strengthening the market for forestry. It provides additional income for landowners to help them keep planting trees and managing their forests versus converting their land for other uses.

It's because of these strong markets that data from the US Department of Agriculture shows that forest inventory and forested area in the US Southeast have steadily increased since the mid-1950s, and forest carbon stocks have more than doubled.

Well-managed forests are net carbon sinks, absorbing exponentially more emissions than are

released by forestry activities, including the production and consumption of wood pellets. As an example, in South Carolina, the volume of live trees has increased by more than 1 billion cubic feet between 2014 and 2019. This trend has held steady for decades.

Wood biomass fuel is a meaningful, but small, part of the overall forest economy. It accounts for only 3% of all wood harvested each year across the Southeast. Therefore, it is easy to see why our forests remain stable, productive, and healthy, even as they provide a steady supply of renewable forest products, including biomass fuel.

Finally, I would like to point out that the Effingham Pellet facility is specifically designed to produce wood pellets using only the wood residues that are leftover from sawmill operations. These residues are a nuisance for sawmills, and often have few other commercial uses.

Effingham pellets will help alleviate this problem by providing a higher value, more efficient use for this existing byproduct.

The science and real-world data show us that an approved permit at the Effingham facility will help to fight climate change, support sustainable forestry and provide jobs and economic investment for the local community.

Kind regards,

[REDACTED]

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I know you get all these cookie-cutter letters - I will cut to the chase and literally \*beg\* you to do all you can to convince SC DHEC to deny **\*\*ANY\*\*** expansion of the wood pellet industry in South Carolina. Further, PLEASE immediately address the environmental justice implications of the proposal in Effingham, South Carolina. Look beyond the interest of mankind, and leave some room for other species - both animal and plant.

Simply - we need EVERY. SINGLE. SEPARATE. TREE THAT WE HAVE, NOW!!!! And, we truly need to plant MORE.

Please - don't facilitate the continued outright greed of those who would cut down MORE - please,

May you make the correct decision to TRULY sleep well tonight -

Thank you.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I insist SC DHEC deny any kind of expansion of the wood pellet industry in South Carolina. And you immediately work on resolving the environmental justice problems with this proposal in Effingham, South Carolina.

I want the DHEC to prevent the damage this proposed facility will cause to the climate, to South Carolina forests, to biological diversity, and to the health and well-being of residents.

I expect the DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release hazardous particulate matter (PM), volatile organic compounds (VOCs), and other hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already suffered disproportionately from economic hardship and the COVID-19 pandemic. They are rallying their voices against this project because they don't need toxic pollution in their air.

These South Carolina residents would be paying for this wood pellet facility in numerous ways. And the entire community will bear the economic and health costs this facility only adds only 10 jobs to our local economy! We know there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will just worsen our climate crisis, ecosystem loss, and corrupt the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,  
[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

Anymore logging of forests would devastate the climate chaos already in a severe state. The latest greenhouse gas is 417.14 parts per million, a new record high, not what we want to see. Already we see the United States and Canada have soaring high rates of heat at the present time.

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]

Dear Bureau of Air Quality Public Notice Coordinator,

I am writing to urge SC DHEC to deny any expansion of the wood pellet industry in South Carolina and to immediately address the environmental justice implications of the proposal in Effingham, South Carolina. I urge DHEC to address the impacts that this proposed facility would have on the climate, on South Carolina forests, on biodiversity, and on the health and well-being of residents. I call on DHEC to:

- Deny Effingham Pellets LLC's air permit application to begin production in its proposed mill.
- Complete a full Environmental Justice Report.

This proposed project will release particulate matter (PM), volatile organic compounds (VOCs), and hazardous air pollutants (HAPs) into the surrounding region. The communities of Effingham and Florence County have already been disproportionately impacted by economic hardship and the COVID-19 pandemic, and they are rallying their voices against this project.

South Carolina residents would be subsidizing this wood pellet facility. All the while it brings only 10 jobs to our local economy, if that, and does not contribute to our economy otherwise. As we know, there is no existing market for wood pellets in the United States. The members of the Effingham community deserve to have their voices heard. A new wood pellet mill will further degrade our climate, ecosystem, and the health of our people. Denying this permit is essential to protect the health and well-being of all South Carolinians now and in the future.

Thank you for the opportunity to comment on this permit.

Sincerely,

[REDACTED]
