Subject: Expanded ABC+ Pilot Study Report - Former WestPoint Home Site, Clemson, SC - DHEC File #20395

Kimberly,

The Adhoc link below will direct you to the Expanded ABC+ Pilot Study Report for the former WestPoint Home site in Clemson, South Carolina. The report cover letter is attached as a PDF. A hard copy of this report is not being submitted, however, if you would like for me to send a hard copy, please let me know.

Re: Expanded ABC+® Pilot Study Report
Former WestPoint Home Site – Clemson, SC
Oconee County – File #20395

Attached is a copy of the Expanded ABC+® Pilot Study Report for the former WestPoint Home Site in Clemson, South Carolina. We are pleased with the progress shown by this treatment method and request that SCDHEC revisit the 2017 Focused Feasibility Study to consider approving ABC+® as the preferred remediation method. We believe that ABC+® is the safest proven remedy for this site. Please let us know if you have any questions or need additional information.

Sincerely,

Eddie Lanier, PE
Consultant for WestPoint Home LLC

Executive Summary

The Former WestPoint Home Site (Site) is the location of a former textile manufacturing complex that was situated along West Cherry Road near Clemson, South Carolina. The property was acquired by private land developers who are now repurposing the land for residential housing units, apartment buildings, and mixed-use commercial lots. The WestPoint Home (WPH) facility was closed in April 2006 and most of the buildings and infrastructure were demolished and removed. The land was regraded in anticipation of redevelopment activities during the period of 2008/2009.

Environmental investigations conducted at the Site revealed evidence of groundwater contamination emanating from beneath the former textile facility. Groundwater assessment data suggested the presence of two contaminant plumes within the groundwater, each consisting mainly of the volatile organic compound (VOC) tetrachloroethene (PCE). From their subsurface points of origin, each of these two VOC plumes migrate in a southeastwardly direction toward Hartwell Lake.

In support of the Focused Feasibility Study (FFS) that was prepared to evaluate suitable remedial alternatives to address the PCE-affected Site groundwater, TRC Environmental Corporation (TRC) initiated a pilot study in 2016. The purpose of this pilot study was to evaluate the potential for application of a treatment technology commercially referred to as ABC+®. This remedial treatment alternative integrates a lactate-based treatment component that promotes microbe-facilitated enhanced reductive dichlorination (ERD) with an abiotic treatment technique that utilizes zero valent iron (ZVI). The biotic and abiotic components of the ABC+® product blend were previously documented to impart useful synergistic treatment effects in addressing VOC plumes.

The initial pilot study conducted in 2016 was conceived and implemented as a small-scale demonstration at two selected areas of the Site. The primary objective of the pilot study was to acquire evidence and document the potential treatment effectiveness of the ABC+® treatment product. After reviewing the initial pilot study test results, SC DHEC expressed reservations and concerns regarding the overall efficacy and robustness of test results that the Department considered to be limited and inconclusive. Because TRC and WPH felt that the ABC+® pilot study results, in fact, provided actual lines of evidence that the ABC+® pilot study injections were promoting useful treatment of the PCE contaminants, WPH elected to respond to the Department's concerns by proposing to conduct a considerably more expanded version of the ABC+® pilot study.

An Expanded ABC+® Pilot Study was undertaken in 2019 involving a significant increase in the number of treatment locations, a large increase in the applied volume of ABC+® injectate, and a significant expansion of the performance monitoring network to acquire data that would more conclusively

demonstrate observable changes and treatment responses to the distribution of PCE in the underlying groundwater.

The expanded ABC+® treatment injections were conducted during the period of May through July 2019 using direct push technology (DPT). ABC+® was introduced into 80 locations along seven transects of the 0.1 mg/L PCE isoconcentration contour line within the upgradient PCE plume. Following completion of the expanded ABC+® injection event, initial monitoring for indicator parameters was conducted in October/November 2019 and a broader field and laboratory performance monitoring event was conducted in March 2020. It was during this timeframe that shutdown of field activities was deemed to be necessary due to the COVID-19 global pandemic. After a hiatus of several months, WPH directed TRC to resume evaluation of the March 2020 test results and communicate with SC DHEC regarding recommendations for resumption of the expanded ABC+® pilot study.

TRC conducted another round of performance monitoring activities at the Site in March 2021, during which groundwater samples were collected from 53 permanent wells and eight direct-push sampling locations. The permanent wells provide data for four groundwater intervals: shallow (water table) zone, intermediate zone, transition zone, and bedrock zone. The direct-push sampling locations each provided supplementary data for the shallow, intermediate, and transition zones, as the deepest injections and deepest direct push groundwater samples were constrained to the top of the transition zone.

In this Expanded ABC+® Pilot Study report, TRC has compiled the results of the March 2021 performance monitoring events into a document that conclusively demonstrates the treatment efficacy and suitability for conducting ABC+® treatment injections at the Site. In the two-year period since expanded ABC+® treatment of the upgradient VOC plume area was conducted, TRC has confirmed and documented significant reductions in PCE concentrations within the targeted treatment zone. Additionally, more pronounced lines of evidence regarding the suitability and expansion of ERD-conducive treatment conditions across the targeted treatment zone are now available for the Department's review and consideration. Based on the available Site data and lines of evidence, TRC has concluded that the Expanded ABC+® Pilot Study has successfully demonstrated that this treatment technique is suitable and effective for remediation of PCE-affected groundwater across the Site. On this basis, TRC recommends that the Department initiate review and reconsideration of the existing Focused Feasibility Study and proceed towards issuing approval of ABC+® treatment as a full-scale treatment remedy for the former WPH Clemson Site.

Section 1
Introduction

WestPoint Home, Inc. (WPH) is the former owner/operator of a textile manufacturing complex located along West Cherry Road near Clemson, South Carolina (Figure 1-1). The facility was closed in April 2006 and the property was later sold to a group of real estate investors. The former buildings and infrastructure of the WPH textile facility were subsequently demolished and the Site was regraded for future redevelopment. These demolition and grading activities occurred during the period of 2008 through 2009.

Subsequent environmental investigations conducted across the Site revealed evidence of VOC-related groundwater contamination, presumably emanating from process piping that was situated beneath the former textile facility. This groundwater contamination was determined to comprise two distinct groundwater plumes, each containing VOCs primarily composed of tetrachloroethene (PCE). These two groundwater plumes are more commonly referred to as the "upgradient" and "downgradient" VOC plumes.

During these earlier Site investigations, various lines of evidence revealed that both of these VOC plumes appear to have been sourced from a network of underground process piping that had serviced the former textile manufacturing complex. After extensive field work and records review, there has been no definitive Site data or historic information to indicate or suggest that either of these two VOC plumes were ever related to any surficial spill(s) and/or releases. Furthermore, extensive soil testing data has also failed to reveal any link between the underlying VOC-related groundwater impacts and the surface soils, which show no indication of prior VOC impacts.

From their subsurface points of origin, each of the two VOC plumes migrate in a southeastwardly direction toward Hartwell Lake. Along the shores of Hartwell Lake, pore water sampling has revealed the presence of low levels of VOCs that are discharging into the surface water of the lake.

The former WPH property is currently owned and managed by Tom Winkopp, Realtor/Developer, LLC. To date, a considerable portion of the Site has been the focus of redevelopment and building, resulting in the construction of various residential housing units, apartment buildings, and mixed-use commercial lots. For the most part, the housing units are being occupied by students attending nearby Clemson University.

Site development activities have encircled the area where the two VOC plumes are situated. While the Winkopp site development team has indicated that further residential development within the immediate vicinity of the upgradient and downgradient VOC plumes is not currently being

contemplated, there is nothing contractual to prevent future site development from occurring in these areas of the Site. There is visual evidence of active site development across most of the remaining acreage of the former WPH property.

1.1 Background

In April 2015, TRC prepared and submitted a work plan for the design and implementation of a pilot study that was designed to investigate the potential applicability of applying an in-situ treatment remedy at the site. The proximity of college students and residents across the Site led TRC to conclude that a groundwater treatment remedy was needed that did not involve the application of aggressive or otherwise dangerous chemicals. Reducing the potential exposure of nearby residents to any hazards was, and remains, and important consideration.

The initial pilot study work plan was submitted to the South Carolina Department of Health and Environmental Control (SC DHEC) and described the methods, means and materials necessary to assess and evaluate the potential applicability and suitability for application of ABC+® treatment technology that integrates a lactate-based treatment approach for inducing microbe-facilitated enhanced reductive dechlorination (ERD) with an abiotic treatment technique that utilizes zero valent iron (ZVI). This treatment technology is commercially referred to as ABC+®, and offers a promising approach to conducting an in situ treatment of VOCs present within the underlying groundwater safely in proximity to the nearby community of college students and their dependents. Following subsequent discussions with SC DHEC and incorporation of Department review comments, the ABC+® pilot study work plan was formally approved for site implementation in June 2016.

The ABC+® pilot study was initiated in the field on June 20, 2016. The pilot study was conducted in two locations – one treatment area situated near the upper end of the upgradient VOC plume area and the second treatment area located near the head of the downgradient VOC plume area. Three DPT injection locations were designated for each pilot study work zone. In order to manage the required timing and cost of the pilot study, the overall scope and scale of the initial ABC+® pilot study was intentionally limited to the DPT injection locations and nearby performance monitoring wells. Thus, the focus and objective of the initial ABC+® pilot study was to provide "proof of concept" information and details that could be used to further substantiate the details and conclusions of a Focused Feasibility Study (FFS) for the Site groundwater.

After nearly a year of in-situ treatment and performance monitoring, the initial ABC+® Pilot Study Report was prepared and submitted to SC DHEC in May 2017. In a letter dated October 12, 2017, SC DHEC offered their comments on the pilot study report, suggesting that the scope of the pilot study was too limited and the results were felt to be inconclusive. The Department wanted to see more substantial evidence of active ABC+® treatment response and reduction in PCE concentrations via biotic and abiotic pathways. The State indicated that they would like to receive "before and after" PCE plume maps and

more conclusive data before they would be willing to consider ABC+® as a suitable remedial treatment alternative for the Site.

Despite the Department reviewer's comments, both Redox Tech and TRC felt that the 2016 pilot study report did identify multiple lines of evidence that revealed the treatment efficacy of ABC+® treatment as a suitable and reliable treatment strategy for the upgradient and downgradient VOC plume areas. The limited size and scale of the pilot study and the timing of the pilot study schedule constrained our ability to track the transport/migration of the ABC+® treatment materials from the point of injection to detection within nearby observations wells, further constraining our ability to generate the "before and after" PCE isocontour maps desired by the SC DHEC reviewer. After nearly 5 years of in situ treatment within the 2016 pilot study treatment zones, TRC can still identify pronounced evidence of applied ABC+® treatment influences.

Keeping the Department's comments, and concerns in mind, TRC revisited the remedial objectives and scope of the initial ABC+® pilot study work plan. In order to suitably address the Department's concerns, it quickly became apparent that the remedial design and scope of the ABC+® pilot study would need to be considerably increased and expanded. Working closely with Redox Tech and WPH, TRC developed an expanded pilot study work scope that would encompass a substantially larger treatment zone area and target treatment efforts within the most concentrated PCE contaminant mass present within the upgradient VOC plume area. By expanding the scope of the initial ABC+® pilot study, TRC developed a more robust experimental design capable of addressing SC DHEC concerns, extensive enough to impart more robust and meaningful treatment efforts within a concentrated area of VOC mass, and large enough in scale and scope to conclusively demonstrate the efficacy of ABC+® treatment as a suitable remediation tool for the former WPH Site. Where the initial 2016 ABC+® pilot study utilized only 3 DPT injection points in the upgradient VOC plume area, the expanded ABC+® pilot study would now make use of 80 DPT injection points.

The workplan for the Expanded ABC+® Pilot Study was prepared and submitted to SC DHEC in May 2018. In a letter dated June 8, 2018, SC DHEC provided its comments to the workplan, requesting various additional details and technical considerations (*i.e.*, permanent monitoring well locations, additional performance monitoring parameters, and introduction of numerical performance criteria). TRC prepared a technical response to address these comments and this document was submitted to the Department on June 22, 2018.

At the request of SC DHEC, a conference call was coordinated and conducted on August 30, 2018. During this call, the project stakeholders were able to discuss the various technical considerations and concerns. As a result of these discussions, a mutually agreeable path forward was developed, which was summarized in SC DHEC correspondence dated August 31, 2018. On October 10, 2018, a revised Workplan for Expanded ABC+® Pilot Study was submitted to address the various technical discussions

and agreements that were set forth in SC DHEC's August 31, 2018, correspondence. The revised Workplan for Expanded ABC+® Pilot Study was approved by SC DHEC in correspondence dated November 16, 2018.

1.2 Purpose and Scope

The Expanded ABC+® Pilot Study included performance of pre-injection field sampling activities, injection of the ABC+® into the subsurface, collection of post-injection performance monitoring, and evaluation of the performance monitoring data. The purpose of this report is to compile and document the implementation and results of the expanded ABC+® pilot study activities.

The scope of this report includes a discussion of the treatment technology that was used during the pilot study, subsequent well redevelopment efforts, pre-and post-injection monitoring results, and a detailed discussion of the various lines of evidence that all point towards ABC+® treatment representing a suitable and applicable remedial technology for the former WPH Site.

Section 2
Overview of Treatment Technology

Enhanced reductive dechlorination (ERD) is a widely accepted, biologically mediated process by which chlorinated ethenes (like PCE) can be degraded using specialized microbes under anoxic/anaerobic conditions. During this naturally occurring process, anaerobic microbes (i.e. dehalogenators) have the ability to substitute hydrogen (H) for chlorine (Cl) on various chlorinated ethene compounds, effectively dechlorinating the target compound and ultimately reducing its toxicity.

Reductive dechlorination is fundamentally a redox reaction that requires both an electron donor and an electron acceptor. The anaerobic microbes that are capable of mediating this chemical reaction require nutrients and appropriate/conducive environmental conditions under which they can grow and proliferate. The ABC treatment formulation has been specifically engineered and blended to adapt to a particular site's geochemical characteristics, using a combination of various organic substrates, including lactate esters, glycerine, and emulsified fatty acids that are introduced into the subsurface to serve as the functional electron donors with different metabolic rates. The availability of carbon at different metabolic rates facilitates the growth of a more balanced microbial consortium, including dehalococcoides (the genus capable of completely dehalogenating chlorinated ethenes), without domination by an undesirable species or group (*e.g.*, methanogens). The electron acceptors for the ERD treatment process include the chlorinated VOCs being targeted for treatment, plus other naturally occurring groundwater constituents such as dissolved oxygen (DO), nitrate, manganese (IV), iron (III), sulfate, and carbon dioxide.

The formulation of the organic substrate (electron donor) affects the manner in which the reductive dechlorination treatment process will play out in the environment. Substrates such as sodium lactate can be quickly metabolized by the dehalogenators and can result in enhanced degradation of the chlorinated VOCs. However, these effects may also be short-lived, enabling chlorinated VOC compounds from nearby soils and groundwater to desorb or migrate and create conditions of VOC rebound. Slower metabolizing organic substrates, such as emulsified fatty acids, and vegetable oil (which requires a hydrolysis reaction to fatty acid before it can be used by dehalogenating organisms), are also receiving considerable attention in the literature, but they are also much slower to establish/sustain reductive dechlorination conditions. TRC has considered these possible options and considerations, selecting the ABC® formulation as our desired choice of treatment media for this pilot study. We also readily acknowledge that there are other commercially available treatment additives and choices that can also be tailored to address site-specific conditions.

As indicated earlier, zerovalent iron (ZVI) is an abiotic pathway to facilitate the redox reaction responsible for dechlorinating VOCs via a short-lived acetylene intermediate. The ZVI employed in this

reaction is basically a bulk reducing agent that is of a suitable particle size for aquifer treatment. The corrosion of iron metal yields the formation of Fe^{2+} and hydrogen gas, which can directly reduce chlorinated contaminants or otherwise enhance the reduction process. On activated ZVI surfaces, chlorinated ethenes are directly dechlorinated via the beta elimination pathway without accumulation of the VOC daughter products that are more typically generated during ERD treatment. The by-products of ZVI oxidation also tend to enhance the growth of biological chlorinated compound reducers. ZVI, once injected into the subsurface, does not tend to migrate within the aquifer, but rather stays in-place and continues to remediate VOC-containing groundwater (sometimes for more than a decade) as it passes through the in situ ZVI treatment material.

The combined influence of the biological ERD treatment components with the abiotic treatment components of the ZVI have led TRC to select this treatment material for the pilot study. ABC+® is available from Redox Tech and was utilized for both the 2016 and 2018 pilot studies. According to Redox Tech literature on their ABC+® product, this formulation has been developed to promote both rapid onset and long-lasting reductive dechlorination. This is accomplished by using both the ERD and abiotic treatment components in a symbiotic manner, where each treatment process tends to facilitate and enhance the performance of the other. The relative amounts of the various organic substrates, nutrients and iron can be adjusted to address/accommodate site-specific conditions and requirements.

Section 3
Description of Expanded Pilot Study

The expanded ABC+® pilot study was focused on injection of ABC+® into the underlying groundwater, with primary emphasis on the most contaminated zone of the upgradient VOC plume. This targeted treatment area was characterized by PCE levels at concentrations at or above 0.10 mg/L. Because ABC+® is a lactate-based carbon substrate containing many essential nutrient amendments suitable for ERD and it also incorporates finely milled ZVI powder, ABC+® affords a unique *in situ* treatment formulation that can impart both a biotic (*i.e.,* ERD) treatment component and an abiotic (*i.e.,* ZVI) treatment component. As with the previous 2016 pilot study, a suitable inoculum of anaerobic micro-organisms (*i.e.*, Shaw's Dechlorinating culture – SDC-9™) was injected along with the ABC+® to serve as a bio-augmentation source during the expanded pilot study.

3.1 Pilot Study Objectives

The objectives of the expanded pilot study included the following:

- Conduct robust application of the ABC+® treatment technology within the upgradient VOC plume,
- Raise SC DHEC confidence and support that this treatment alternative is suitable for current site conditions, as well as aligned with the ongoing site residential development activities,
- Achieve meaningful and documented VOC reductions within the targeted treatment area of the upgradient VOC plume area,
- Document how the observed distribution of PCE and VOC daughter products respond to the applied ABC+® treatment efforts, and
- Collect suitable field data to support SC DHEC's subsequent review/approval the August 2017 Focused Feasibility Study (FFS).

3.2 Pre-Injection Sampling and Site Conditions

Prior to collecting pre-pilot groundwater samples, TRC redeveloped several monitoring wells that had experienced "daylighting" during the initial 2016 pilot study. "Daylighting" is a term that refers to conditions where the applied injectate treatment fluid emerges from the ground surface at the point of injection or within a nearby monitoring well. Ideally, the injected treatment material would displace a uniform disk of soil surrounding the injection point. In reality, the pressurized injectate tends to follow preferential flow pathways that occur along zones of weakness within the soil fabric, such as remnant foliation, fractures, joints, and soil heterogeneities. The wells that incurred "daylighting" during the 2016 pilot study, included RMW-23, RMW-23A, and RMW-27A.

TRC conducted extensive redevelopment of these monitoring wells in September through November 2018, and submitted a technical memorandum (TM) for SC DHEC's review on December 20, 2018. The memorandum concluded that redevelopment and rehabilitation efforts had improved the groundwater quality conditions observed within the monitoring wells. One well, RMW-23, continued to yield ZVI filings during redevelopment and was recommended for special sampling procedures that would be applied during VOC monitoring events. For that well, an industrial-grade magnet has been used to capture/remove accumulated iron filings, if any, that may be present prior to collecting performance monitoring samples.

Pre-injection (i.e., baseline) groundwater sampling was conducted during the timeframe of January 16 and February 14, 2019, and included collection of water levels and groundwater samples from each of the 77 permanent monitoring wells currently in use at the Site. Groundwater samples were also collected from 8 multi-depth DPT borings located within the upgradient VOC plume area. Three groundwater samples were collected at each DPT location; one representing the shallow water table zone (i.e., corresponding to the screens of the shallow monitoring wells), one representing the intermediate zone (i.e., corresponding to the depth of the screen of wells having the "A" in their well naming designation), and one at DPT refusal (i.e., corresponding to the top of the transition zone). Well purging and sampling were performed in accordance with the procedures described in Subsection 3.7 of the approved Site Sampling and Analysis Plan (SAP). Field parameters (*i.e.*, pH. ORP, DO, temperature and specific conductivity) were measured and recorded during well purging activities. Pre-injection sample locations are indicated on Figure 3-1.

Groundwater samples were submitted to Shealy Environmental Services, Inc., a South Carolina certified analytical laboratory. Groundwater samples collected from the 77 monitoring wells and 8 multi-depth DPT borings were analyzed for Target Compound List (TCL) VOCs using USEPA Method 8260B. In addition, samples collected from the 45 upgradient monitoring wells and five of the downgradient wells (i.e., RMW-09 and RMW-23/23A/23B/23C) were also analyzed for dissolved gases (i.e., ethane, ethene, and methane), ERD indicator parameters (nitrate, sulfate, and chloride), and bromide.

The baseline data were submitted to SC DHEC in a letter dated March 20, 2019. This letter included the following information:

- Data point location map
- Summary tables of baseline results
- Water table and potentiometric surface maps for the water table, intermediate zone, transition zone, and bedrock monitoring wells
- Tetrachloroethene isoconcentration maps for the water table, intermediate zone, transition zone, and bedrock monitoring wells

Groundwater flow directions continued to reflect the flow rate and migration direction similar to previous sampling events. Of particular interest was the fact that the groundwater results from the early 2019 baseline sampling showed continued distribution of ABC+® treatment effects from the initial 2016 pilot study injections. These baseline results are discussed in greater detail in Section 4 of this report, to provide a base of comparison for the post-injection performance monitoring results.

3.3 Pilot Study Injections

During the period of May 14 through July 10, 2019, ABC+® injections were conducted at 80 locations, targeting the 0.1 mg/L PCE isoconcentration contour of the upgradient VOC plume (see Figure 3-1). At each location, 50 pounds of ABC, 50 pounds of ZVI, 0.05 L of concentrated (x4) DHC culture, 5 pounds of magnesium oxide, 0.5 pounds of sodium tripolyphosphate, approximately 2 pounds of guar, and 44 gallons of deoxygenated water were injected at two-foot intervals starting from the deepest interval, which was determined by injector refusal. Bromine was added as a tracer to eight injection locations. Injection locations containing bromine are highlighted in yellow on Figure 3-1. Appendix A provides a copy of the Field Summary Report generated by Redox Tech.

The ABC+® injections were conducted across seven transects of the upgradient VOC plume, perpendicular to the direction of groundwater flow. These transects were identified and labeled as A through G and each included between 7 and 17 locations along the transect. Injection depths ranged from 12 to 90 feet bls. The shallowest interval at each location was between 12 and 20 feet below land surface (bls) depending on depth to water at the location. In response to prior "lessons learned" from the initial 2016 pilot study, reduced injection pressures were applied at shallower depths to minimize the potential for "daylighting" of the injectate. Only five minor instances of "daylighting" were encountered at injection locations C-6, E-8, E-9, F-10, and F-12. Daylighting occurred at each of these locations during the injection process, all of which were documented at relatively shallow depth intervals. In each case, injection flow rates were reduced to address these occurrences.

Bromide at a concentration of approximately 40 mg/L, was introduced with the ABC+® injectate as a groundwater tracer in eight locations (C-4, C-5, E-1, E-2, F-13, F-14, G-6, and G-7). These injection locations were selected to evaluate groundwater flow directions at specific locations.

Total injected quantities for the expanded ABC+® pilot study are summarized in the following table.

ITEM	QUANTITY	UNITS
ABC+® slurry	127,700	gallons
Depth intervals	2,554	--
ABC	127,700	pounds
ZVI	127,700	pounds
Magnesium oxide	12,770	pounds
Sodium tripolyphosphate	1,277	pounds
DHC concentrated bacteria (x4)	130	liters
Guar	5,108	pounds
Sodium bromide (8 locations)	2,232	grams

The ABC+® injection event was conducted as planned and without incident.

3.4 Pilot Study Performance Monitoring

The Expanded ABC+® Pilot Study Workplan established quarterly and semiannual performance monitoring that was intended to provide quarterly field and laboratory indicator parameter monitoring and two episodes of semiannual monitoring to address VOC analyses and dissolved gases.

The first quarterly performance monitoring was conducted October 25 through November 8, 2019. A summary of the monitoring results was submitted to SC DHEC on December 10, 2019. Despite the short period of time from the onset of the ABC+® injection event, the results from this sampling provided early indications of ERD activity within the aquifer.

The first semiannual performance monitoring was conducted during March 2020. Because of the global COVID-19 pandemic and its associated quarantines and lockdowns, WPH decided to suspend further work on the pilot study. SC DHEC was notified of this suspension in work via correspondence dated April 6, 2020. Thus, the quarterly sampling event originally planned for July 2020 and the semiannual sampling event planned for November 2020 were not conducted. Work resumed on the pilot study project in September 2020 and involved analysis and evaluation of the March 2020 performance monitoring results. A letter report communicating TRC's findings from this semiannual monitoring event was submitted to SC DHEC on December16, 2020. The results from the March 2020 semiannual monitoring event yielded results that revealed an expanded area of treatment, exhibiting ERD-conducive conditions and pronounced reductions in PCE isocontours, when compared to pre-injection conditions.

Because of the COVID-related disruptions to the original pilot study monitoring schedule, SC DHEC approved postponement of the second semiannual sampling event until March 2021. This was a useful

schedule adjustment, as TRC could now evaluate Site conditions within the ABC+® treatment zone a full year after the first semiannual sampling event was conducted. Based on the previous monitoring results, SC DHEC also agreed to adjust the following elements of the monitoring program for the second semiannual sampling:

- Downgradient plume monitoring wells MG-05/A, RMW-16/A, and RMW-17 were added to the list of wells to be sampled;
- Nitrate and chloride were deleted from the parameter list; and
- The purge method was revised from the Multiple-Volume Purge Method (Groundwater Monitoring Operating Procedure Section 3.4) as referenced in Site Assessment Sampling and Analysis Plan (TRC, July 2011, revised March 2013) to the Low-Flow Method (Groundwater Monitoring Operating Procedure Section 3.5)[1].

During the final performance monitoring event for the Expanded ABC+® Pilot Study in March 2021, groundwater samples were collected from the 45 upgradient plume monitoring wells, 8 multi-depth DPT borings, and ten downgradient plume monitoring wells (i.e., MG-05/05A, RMW-09, RMW-16/16A, RMW-17, and RMW-23/23A/23B/23C). Section 4 of this Pilot Study Report provides a more detailed discussion of the results and implications regarding the distribution and effectiveness of the ABC+® treatment media.

3.4.1 Water Level Measurements and Groundwater Flow

Prior to collecting groundwater samples, water level measurements were collected at all 77 monitoring wells in use at the site on March 8-9, 2021. These measurements are summarized on Table 3-1.

Figure 3-2 illustrates the observed configuration of the water table based on water levels measured in shallow depth monitoring wells. Figures 3-3 through 3-5 illustrate potentiometric surfaces developed from water level measurement collected from intermediate depth wells, transition zone wells, and bedrock wells, respectively. At each depth interval, the observed direction of horizontal groundwater flow is to the east-southeast, toward Hartwell Lake.

Vertical groundwater flow pathways were also evaluated along cross sectional lines drawn along the long axis of the upgradient and downgradient VOC plumes. Figures 3-6 and 3-7 illustrate generalized vertical groundwater flow pathways along the A-A' and B-B' cross sections, respectively. Equipotential lines shown on Figures 3-6 and 3-7 were drawn based on measured water elevations only; potential influences due to variations in geology have not been taken into account. As illustrated on these figures, downward vertical flow is observed at every well nest

[1] USEPA Region 4 Science and Ecosystem Support Division Operating Procedure number SESDPROC-301-R4, April 2017

except the DG-06 grouping. An upward gradient from the lower aquifer toward the lake is observed, as would be expected in a groundwater discharge area.

3.4.2 Field Indicator Parameters

Field indicator parameters were collected to demonstrate stability of purging the wells and to provide information about the condition of the aquifer with respect to ERD-conducive conditions. Field indicator parameters included pH, temperature, specific conductivity, dissolved oxygen, turbidity, and ferrous iron. These measurements are summarized on Table 3-2.

3.4.3 Laboratory Results

Samples were collected from 55 monitoring wells and 24 DPT locations for laboratory analysis of VOCs, metabolic gases (i.e. methane ethane and ethene), bromide, and sulfate. These results are summarized on Table 3-2. In addition, samples were collected from RMW-27, RMW-18A, RMW-20B to evaluate to presence of DHC (dechlorinating) anaerobes. These results are summarized on Table 3-3. Appendix B provides a comprehensive data table that includes field and analytical results from 2014 through 2021. Appendix C provides laboratory data sheets for the Expanded ABC+® Pilot Study analytical data (pre-injection/baseline monitoring, first March 2020 semiannual sampling event, and the second March 2021 semiannual sampling event).

Note: Only constituents detected in at least one sample are reported in this table.

[(2)] Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

[(3)] The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Section 4
Discussion of Pilot Study Results

The expanded ABC+® pilot study was initiated on May 13, 2019, and the injections were completed on July 12, 2019. The final round of semiannual performance monitoring was completed in March 2021. The original schedule for completion of the ABC+® pilot study was extended by over 6 months due to the project hiatus caused by the global COVID-19 pandemic and its associated quarantines and lockdowns. This amounted to an overall project timeframe of slightly more than 20 months, from the onset of ABC+® injections to the completion of performance monitoring. In the end, the overall impact and influence of these project delays was not problematic, as ABC+® treatment was able to continue unabated and TRC has been able to collect and evaluate various data sets and lines of evidence over a longer timeframe. The technical discussion that follows is intended to highlight those aspects of the expanded ABC+® pilot study that have led us to conclude that the application of ABC+® represents a reasonable and cost-effective option for remediation of PCE in the groundwater of this Site.

4.1 Changes in PCE Concentration and Distribution

Sitewide groundwater monitoring performed in January and February 2019 is used in this report as the baseline for demonstrating the robust changes in groundwater quality achieved during the Expanded ABC+® Pilot Study. These data are summarized in the comprehensive data table provided in Appendix B. It should be noted that the 2019 data revealed notable reductions in PCE concentrations and distribution attributable to the 2016 pilot study despite the relatively small amount of ABC+® injected during that pilot study. These changes can best be observed by comparing the pre-injection data for the initial pilot study (July 2014, June 2015 for newly installed wells) to the February 2017 final sampling event for the 2016 pilot study and the 2019 pre-injection data (January-February 2019) for the expanded pilot study.

The following are key observations regarding continued influences and treatment effects from the 2016 ABC+® pilot study:

- Within the two pilot study areas (RMW-27 well nest for the upgradient plume, RMW-23 well nest for the downgradient plume) PCE concentrations remained lower in several of the sampling intervals. Likewise, reducing conditions persisted in these sampling intervals.
- Based on isoconcentration figures for the 2019 pre-injection PCE data, the locations of the 2016 pilot study continue to exhibit lower concentrations of PCE than neighboring areas. Irregularities in the isoconcentration contours also suggest lower than expected PCE concentrations at DP-21 and RMW-20 in the shallow groundwater, at DP-23 in the intermediate zone and at RMW-20B in the

transition zone. These lower-than-expected concentrations likely represent treatment effects from the 2016 pilot study injections.

- The presence of metabolic gases (i.e. ethane, ethene, and methane) is a useful indicator of the dechlorination of chlorinated ethenes such as PCE. Metabolic gas results from the sitewide sampling prior to the 2019 expanded pilot study revealed the presence of metabolic gases in locations farther from the two 2016 pilot study locations than would be assumed from typical advective dispersion of treatment chemicals or treatment effects. Prior to the expanded pilot study, detected metabolic gases reached as far downgradient as RMW-13 in the shallow groundwater, as far downgradient as DP-27A in the intermediate zone, as far downgradient as RMW-14B in the transition zone, and as far downgradient as RMW-10C in the bedrock zone. The well locations with metabolic gas detections were not contiguous. These observations suggest the presence of preferential flow pathways throughout the site that are occasionally intercepted by a monitoring point.

Figures 4-1 through 4-3 provide PCE distribution maps for the 2019 data at the top of the figure and for the 2021 data at the bottom of the figure. The data are presented for the shallow (water table) zone, the intermediate zone, and the transition zone. These figures show significant reductions in PCE within the targeted treatment zone. Figure 4-4 provides a PCE distribution cross-section map of the upgradient plume area. This figure, likewise, shows significant reductions in PCE concentrations within the ABC+® treatment zone. Figure 4-5 provides a PCE distribution cross-section map of the downgradient plume area. Note how this figure likely reveals continuing treatment effects from the 2016 pilot study, although effects from the Expanded Pilot Study are also likely superimposed on these results.

Figures 4-6 through 4-8 provide distribution maps for PCE daughter product cis-1,2-DCE in the shallow, intermediate, and transition groundwater zones, respectively. Each figure shows the distribution based on pre-injection groundwater samples collected in January and February 2019 at the top of the page and the distribution based on March 2021 performance monitoring at the bottom of the page. Notable in this set of figures is the evidence in the 2019 figure of continuing ERD effects from the 2016 pilot study. The 2021 distribution for each depth shows the enhancement of ERD effects from the Expanded ABC+® Pilot Study ABC+® injections. Although the ZVI portion of the ABC+® also dechlorinates PCE through the daughter products, complete dechlorination often happens quickly enough that daughter products are not observed in performance monitoring. Thus, locations within the treatment zone with minimal observed cis-1,2-DCE concentrations may indicate areas where ZVI treatment is dominant.

Molarity graphs can be used to observe groundwater quality changes at specific locations. Figures 4-9 through 4-12 are molarity graphs of PCE and its daughter products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC). The top graph shows concentration in mg/L over time. The lower graph shows the same data converted to nanomoles per liter. Converting the concentration data into molar data is helpful in evaluating ERD progress because it corrects for the fact

that a molecule of PCE has much more mass (165.82 grams/mole) than a molecule of VC (62.50 grams/mole).

Figure 4-9 provides the molarity graph for RMW-27A, the upgradient plume location for the first pilot study. This graph shows that PCE decreased from the beginning of the initial pilot study to the final pilot study sampling event in 2017, then decreased to non-detect by the beginning of the expanded pilot study. PCE concentrations at that location have remained non-detect during the expanded ABC+® pilot study monitoring events conducted in March 2020 and March 2021. TCE was detected during the final sampling event for the initial pilot study (March 2017). The presence of TCE could be attributable to the ERD effects of ABC or the abiotic effects of ZVI (or both). The continuation of non-detect conditions indicates that PCE (if any) in groundwater upgradient of that location is treated prior to reaching monitoring well RMW-27A.

Figure 4-10 provides the molarity graph for RMW-23A, the downgradient plume location for the first pilot study. This graph shows that PCE decreased from the beginning of the initial pilot study to the final pilot study sampling event in 2017 without detection of daughter products. However, by the pre-injection sampling event for the expanded pilot study, the molarity had increased in that location (migration of affected groundwater from upgradient of the well), but conversion of daughter products, especially cis-1,2-DCE, had also occurred. During the expanded pilot study, molarity decreased substantially in this well, demonstrating ERD treatment effects caused by the application of ABC+®. Although RMW-23A is a downgradient plume monitoring well, the expanded pilot study included injections in locations at the north ends of injection Rows F and G (refer to Figure 3-1), an area expected to be upgradient of that monitoring well.

Figure 4-11 provides the molarity graph for DP-21A as an example of a sampling location demonstrating ERD effects from the expanded pilot study. At the time of the first semiannual performance monitoring event in March 2020, a small decrease in PCE concentration was observed, but daughter products were not detected. A year later, in March 2021, a substantial decrease in molarity had occurred in that location and the remaining molarity was relatively equally divided between PCE, TCE, and cis-1,2-DCE, with a very low detection of VC. This demonstrates the increased extent of ERD conditions in 2021, as the injected ABC continued to disperse within the treatment area.

Figure 4-12 provides the molarity graph for RMW-18A as an example of a sampling location demonstrating ZVI-dominated treatment effects. Substantial decreases in PCE concentration have occurred with no PCE daughter products detected.

4.2 Other Indicators of Pilot Study Performance

The Expanded ABC+® Pilot Study Workplan included a table of performance monitoring criteria that were requested by SC DHEC for evaluating ABC+® performance during the pilot study. In addition to the

observed changes in contaminant concentration discussed in Section 4.1 above, the workplan also included 11 other indicators related to reductive dechlorination. These supplemental indicator parameters are discussed in this section.

It is a widely accepted premise that reducing groundwater conditions are necessary for biologically mediated reductive dichlorination to occur and be sustained. Low dissolved oxygen (DO <0.5 mg/L) concentrations and low oxidation-reduction potential (ORP < 50 mV) can be useful indicators of reducing conditions. The presence of reduced iron and a decrease in sulfate concentrations can also be an indication of reducing conditions. The targeted treatment area of the Site experienced pronounced reducing conditions that were sustained during the expanded pilot study. At the end of the 2016 pilot study, reducing conditions were mostly confined to the immediate vicinity of the 2016 pilot study injections. Reducing conditions have subsequently been expanded across a much broader portion of the Site, as documented by the March 2021 performance monitoring data. Figures 4-13 through 4-15 indicate the areas of pronounced reducing conditions within the shallow groundwater, intermediate zone, transition zone, and bedrock zone, respectively, based on the 2019 pre-injection monitoring results and 2021 performance monitoring results. For each monitoring location within each groundwater zone (shallow, intermediate, and transition), the reducing condition parameters were considered together, and reducing conditions are indicated as pronounced for a given location depicted in the figure if more than two indicators are positive.

Groundwater pH in the range of 5 to 9 is generally considered optimal for reductive dichlorination to occur. A review of pH results observed during the March 2021 performance monitoring event indicates that most pH results fall within this optimal range. Within the ABC+® treatment zones, the addition of a pH buffer in the injectate appears to be maintaining pH within the optimal range.

Dissolved metabolic gases (i.e. ethane, ethene, and methane) are another useful indication of ongoing degradation of PCE. As discussed in Section 4.1, dissolved gases were observed in some unexpected locations during the 2019 pre-pilot groundwater sampling event. However, the extent and concentrations of dissolved gases were much wider in samples collected in March 2021. It should be noted that metabolic gases can be ephemeral and tend to dissipate readily from the aquifer once they are formed.

Increases in specific conductance, the presence of a lactate peak on ion chromatograms, and the presence of specific biological markers in qPCR testing can all serve as useful indicators of the active presence and/or ongoing activity of the ABC+® treatment chemicals applied to induce reductive dechlorination. However, as the injected treatment chemicals disperse over time, many of these indicators can become more difficult to discern. Overall, TRC did not find that these indicators provided useful information about treatment activity within the aquifer over the extended timeframe and distance from the injection locations.

Nitrate and chloride were originally requested by SC DHEC for inclusion in the initial list of monitoring parameters. In lab studies, nitrate can serve as an indicator of reducing conditions and chloride as an indirect measure of dechlorination. As discussed in the summary report for the March 2020 performance monitoring event submitted to SC DHEC in December 2020, TRC did not observe these parameters provided any useful indications when evaluating the March 2020 data. Subsequently, the continued requirements for nitrate and chloride monitoring were deleted from the sampling protocols utilized for the March 2021 monitoring event, as approved by SC DHEC in December 2020.

Bromide tracer was included in the injected material at eight locations during the expanded pilot study injections. The locations for tracer injections were selected in hopes of identifying possible hydrogeologic, preferred-migration pathways. During the March 2021 sampling event, increases in bromide above baseline levels were not observed in any downgradient monitoring wells. This is not an altogether unexpected phenomena, given bromide's pronounced solubility in water.

4.3 Implications for the Focused Feasibility Study

The initial, small-scale pilot study was conducted in 2016 to support selection criteria for a suitable remedial action alternative as set forth presented in the August 2017 Focused Feasibility Study (FFS; TRC 2017). While the small-scale 2016 pilot study successfully demonstrated the feasibility of using direct push technology to inject ABC+® into the subsurface to a depth associated with the top of the transition zone and demonstrated that ABC+® could impart ERD/ZVI-mediated treatment influence into the aquifer, the amount of ABC+® treatment chemical injected and the duration of the pilot study monitoring period did not provide the desired level of treatment response anticipated by SC DHEC. On this basis, the Department deemed the 2016 pilot study results to be inconclusive. The Expanded ABC+® Pilot Study has subsequently addressed SC DHEC's concerns by introducing a much larger volume of ABC+® injectate across a much broader treatment zone and over a much longer performance monitoring period. As a consequence of the expanded ABC+® pilot study, substantial and pronounced long-term decreases in PCE concentrations have now been demonstrated.

The 2017 FFS included the following in situ treatment alternatives for SC DHEC consideration as the preferred remedy for the upgradient and downgradient VOC plumes identified at the Site:

- *In situ* chemical oxidation (ISCO) - a widely accepted and aggressive treatment strategy for degrading chlorinated VOCs in the groundwater of the Site. Because the Site is the focus of ongoing residential and light commercial construction (i.e. student and single-family housing), the application of ISCO in proximity to a residential community setting creates unnecessary safety and health concerns/hazards.
- Enhanced Reductive Dechlorination (ERD) – this treatment strategy represents another widely accepted remedial approach that relies upon stimulation/augmentation of naturally occurring anaerobes that possess the unique ability of degrading VOCs via dehalogenation of the chlorinated ethenes. For a site like the former WPH facility, ERD would require introduction of suitable

nutrients and organic substrates to facilitate this anaerobic transformation and ultimately facilitate transition into monitored natural attenuation (MNA). This remedial alternative was viewed favorably with regards to application within a residential community setting.

- Zero Valent Iron (ZVI) - Similar to ISCO, ZVI represents a physical-chemical approach to inducing reductive dechlorination of chlorinated ethenes. ZVI functions best in a reducing environment and has demonstrated success in a wide variety of different environments and flow regimes. ZVI is best applied in manner involving a permeable reaction barrier (PRB), in which the VOC-impacted groundwater is allowed to migrate through the treatment media. The heterogenous geology of the former WPH Site precludes installation of a suitable PRB that would not allow migration of VOC-impacted beneath the treatment wall.
- Anaerobic BioChem Plus (ABC^{+}) – ABC^{+} represents a useful and appealing hybrid of the ERD and ZVI treatment technologies. As demonstrated by the Expanded ABC+® Pilot Study, it is possible for ERD and ZVI to work together in a synergistic manner to influence the groundwater geochemistry, promote a reducing environment and achieve meaningful and sustainable reductions in VOC levels, over time. TRC views the use and application of ABC+® as a unique, cost-effective, and efficient treatment strategy for addressing the Site conditions observed at the former WPH Site.

On the basis of the Expanded ABC+®Pilot Study, TRC now believes that there is sufficient and suitable information available to enable SC DHEC to conduct and finalize their review of the 2017 FFS.

Section 5
Findings, Conclusions, and Recommendations

The Expanded ABC+® Pilot Study consisted of targeted injections of ABC+® at 80 locations within the 0.1 mg/L PCE isocontour of the upgradient VOC plume area. These injections were completed in July 2019. Subsequent performance monitoring activities were conducted across the targeted treatment area and completed in March 2021. The performance monitoring results are summarized in this report and demonstrate that the treatment influence and effects of the ABC+® injections were significant and sustainable. In fact, the ongoing effects of the much smaller 2016 pilot study can still be discerned in the 2019 pre-injection data, the March 2020 data, and the March 2021 data. The data and observations presented in this report conclusively document and demonstrate the long-lasting treatment effects and pronounced influence of ABC+® treatment.

Based on the observed reduction in PCE isoconcentration contours across the targeted treatment zone, and the continued and expanded adjustments to the overall geochemistry and establishment of aquifer conditions conducive to ERD, ABC+® can be documented as an effective, appropriate and cost-efficient method of conducting in situ treatment of PCE in groundwater across the Site.

As discussed in Section 4.1 of this report, molarity graphs suggest that there has been a significant contribution by both the ERD and ZVI components of ABC+® in promoting PCE degradation. The synergistic contributions of ERD and ZVI make ABC+® an ideal and useful remedial alternative for hastening the removal of PCE from the Site aquifer. The use of ABC+® at the former WPH Site also reveals promise in reducing the overall timeframe for completing active treatment measures and transitioning to monitored natural attenuation. On this basis, TRC concludes that there is now sufficient data and lines of evidence to support selection of this remedial treatment measures as the preferred remedial alternative for the Site.

The 2019 Expanded ABC+® Pilot Study injections targeted the area within the 0.1 mg/L PCE isoconcentration contour for the upgradient VOC plume. Since that time, TRC has documented significant reductions in observed PCE concentrations within this area. With the Department's approval, it will be possible to consider expansion of ABC+® treatment efforts further downgradient in the upgradient VOC plume and within the downgradient VOC plume. For these future treatment measures to occur, it will be necessary for SC DHEC to resume consideration of the August 2017 FFS and select a preferred treatment remedy. Once Department approval is received, additional discussion can begin for expanded ABC+® injection activities within areas not previously targeted within PCE-affected groundwater areas.

Brief Narrative

Between May 13 and July 12, 2019, Redox Tech performed direct-push technology (DPT) injections of Anaerobic Biochem Plus (ABC^{+}) with RTB-1 at a total of 80 injection locations (see Figure 1), targeting a 140,000 ft^2 area within the VOC plume identified at the West Point Home Facility in Seneca, South Carolina. Injections were conducted in seven transects perpendicular to the direction of groundwater flow.

Redox Tech advanced direct push borings using Geoprobe 6610, 6620, and 8040 track-mounted rigs. The maximum vertical interval of injection ranged from 12 ft to 90 ft below ground surface (bgs), but actual vertical intervals varied on a point-by-point basis depending on subsurface characteristics. The top of the interval, the shallowest injection depth, for each injection point (IP) was set by the depth to water measured by TRC in adjacent monitoring wells. The refusal depth reached by the Geoprobe 8040 determined the bottom of the vertical injection interval, the deepest injection depth, for each injection point. To ensure proper vertical distribution of amendment, bottom-up injections were conducted at two-foot increments while care was taken to inject no more than five intervals per boring for most of the injection locations. This necessitated multiple borings per location, so injections began with the shallowest boring and worked down to the deepest boring at each location. Any changes made to the planned injections are documented in Table 1.

To maximize viability of the DHC bacterial culture, injectate water was deoxygenated in 4,000 and 5,000 gal pillow tanks. A minimum of twelve hours elapsed prior to injection by combining water with sugar and yeast at a ratio of 100 lbs sugar and 0.5 lbs yeast per 1,000 gal water. Both 1,500 and 2,500 gal polymer (poly) tanks were used to prepare ABC solution for injection.

To yield the desired concentration of amendment, 1,500 lbs ABC (173.6 gal) and 1.5 L concentrated (4x) DHC culture were combined with approximately 1,326 gal deoxygenated water to mix a batch in the 1,500 gal poly tank, or 2,500 lbs ABC (289.4 gal) and 2.5 L concentrated (x4) DHC culture were combined with approximately 2,211 gal deoxygenated water to mix a batch in the 2,500 gal poly tank. Injections were performed using mobile ChemGrout units where ABC solution from the poly tanks was combined with guar, 50 lbs ZVI, 5 lbs magnesium oxide, and 0.5 lbs sodium tripolyphosphate to

form 50 gallons of slurry. Piston pumps on the ChemGrouts were used to inject the slurry into the DPT borings. Each ChemGrout was equipped with a set of data loggers that continuously recorded injection pressures and flow rates.

Redox Tech injected a total of 127,700 gal of ABC$^+$ slurry to complete 2,554 depths. The total slurry volume contained 255,400 lbs ABC$^+$ (127,700 lbs ABC, 127,700 lbs ZVI), 12,770 lbs magnesium oxide, 1,277 lbs sodium tripolyphosphate, and 130 L DHC concentrated bacteria (x4). On July 2, 2019, three depths (72, 74, and 76 ft) were accidently injected a second time.

Each injection depth received 50 lbs ABC, 50 lbs ZVI, 0.05 L concentrated (x4) DHC culture, 5 lbs magnesium oxide, 0.5 lbs sodium tripolyphosphate, approximately 2 lbs guar, and 44 gal deoxygenated water. Eight injection locations received a sodium bromide (NaBr) tracer at a concentration of approximately 40 mg/L (about 8 grams NaBr per 50 gal slurry). The locations that received the tracer were C4, C5, E1, E2, F13, F14, G6, and G7. A total of 2,232 g NaBr was injected between the eight locations selected to receive the tracer. Table 1 provides the specific amount of NaBr each injection point received.

Boreholes were sealed with HolePlug and bentonite crumbles following the completion of each location. Geoprobes were used to push down the bentonite pack and then the holes were grouted with Portland cement grout to land surface.

No major issues were encountered during the project; however, significant backpressure was common at most locations. There were five minor instances of daylighting, all of which were at relatively shallow depths. Injection flow rates were reduced to address this problem.

Redox crewmembers that participated in the remedial fieldwork included Robert Sullivan, Geoff Ives, Daniel Villegas, Bradford Bailiff, Jonathan Sawyer, Chris Lacko, Wes Rivett, Sergio Navarro, Gary Meyers, Mike Podany, Ethan Lee, Kyle Clarke, Blair Mitchell, and Ivan Blackman, with oversight provided primarily by TRC's David Szynal.

The Redox Tech crew fully demobilized on Tuesday July 16, 2019.

Note: Only constituents detected in at least one sample are reported in this table.

(1) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(2) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/L.

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Appendix B - Comprehensive Summary of Analytical Results for Groundwater Samples

Specific Conductivity, Field (µS/cm)	--	**38**	**37**	**28**
Dissolved Oxygen, Field (mg/L)	--	**2.14**	**1.72**	**6.31**
Oxidation Reduction Potential, Field (mV)	--	**163**	**289**	**321**
Turbidity, Field (NTU)	--	**0**	**11.1**	**2.74**
Iron, Ferrous, Field (mg/L)	--	**0**	**0**	**0**

Note: Only constituents detected in at least one sample are reported in this table.

(2) Maximum Contaminant Level; March 2018 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2018).

(3) The total of combined trihalomethanes (bromodichloromethane, dibromochloromethane, bromoform and chloroform) cannot exceed 0.08 mg/l

J - Concentration detected equal to or greater than the method detection limit but less than the reporting limit.

J+ - Concentration considered an estimate biased high based on data validation.

J- - Concentration considered an estimate biased low based on data validation.

UJ - Not detected; quantitation limit may be inaccurate or imprecise.

< - Concentration less than the Quantitation Limit.

> - Concentration greater than the Quantitation Limit.

NA - Not analyzed.

Bolding indicates constituent detection.

Shading indicates concentration exceeds comparison criteria.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000001

Lab Report: TJ09075 Shealy Environmental Services
Samples analyzed for bromide

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to bromide analyses.

Method Blank: Bromide not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: OW-5 was used for MS/MSD analyses of bromide. MS/MSD recoveries and RPD were within QC limits.

Duplicates: A field duplicate was not collected with these samples.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 10/18/2018

Case Narrative
TRC Companies, Inc.
Lot Number: TJ09075

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: ETB / 10-9-18 Lot #: TJ09075

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

3.5 / 3.5 °C ____ / ____ °C ____ / ____ °C ____ / ____ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: Le IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

SR barcode labels applied by: ETB _____ Date: 10-9-18

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000001

Lab Report: TK12020 Shealy Environmental Services
Three groundwater samples analyzed for bromide

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to bromide analyses.

Method Blank: Bromide not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-23 was used for MS/MSD analyses of bromide. MS/MSD recoveries and RPD were within QC limits.

Duplicates: A field duplicate was not collected with these samples.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 12/3/2018

Case Narrative
TRC Companies, Inc.
Lot Number: TK12020

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: ECL / 11/12/18 Lot #: TK120211

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

2.3/2.3 °C ____/____ °C ____/____ °C ____/____ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 6 IR Gun Correction Factor: 0 °C

Method of coolant: ☐ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

SR barcode labels applied by: ECL Date: 11-12-18

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA15044 Shealy Environmental Services
Six groundwater samples analyzed for nitrate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to nitrate analyses.

Method Blank: Nitrate not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: A field duplicate was not collected with these samples.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 1/24/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA15044

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA16022 Shealy Environmental Services
Six groundwater samples analyzed for nitrate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to nitrate analyses.

Method Blank: Nitrate not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: A field duplicate was not collected with these samples.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 1/25/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA16022

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: MEC 1-17-19 Lot #: UA17032

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

1.9/1.9 °C ___/___ °C ___/___ °C ___/___ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 2 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21713

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

SR barcode labels applied by: MEC Date: _____

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA19006 Shealy Environmental Services
Five groundwater samples and one groundwater field duplicate were analyzed for nitrate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to nitrate analyses.

Method Blank: Nitrate not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: Sample DU-19105 is a field duplicate of DP-20A. The RPD for nitrate was 0% which indicates very good precision.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 1/30/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA19006

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: LKH / 1-19-19 Lot #: UA19006

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☑ FedEx ☐ Other: _____

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

1.2 / 1.2 °C ___ / ___ °C ___ / ___ °C ___ / ___ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____.

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____. Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA23037 Shealy Environmental Services
Three groundwater samples and one groundwater field duplicate were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blank were free of detections except as follows:

- Sulfate was detected at 0.40 J mg/L and 0.39 J mg/L in the sulfate method blanks. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in both chloride method blanks. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19101 had no detections of VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-27 was used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- Twelve VOC analytes have MS/MSD RPDs greater than the QC limit. None of these twelve VOC analytes were detected in the unspiked parent sample. No qualifiers were assigned.

Duplicates: Sample DU-19101 is a field duplicate of RMW-27. The RPDs for bromide, chloride, nitrate, sulfate, cis-1,2-dichloroethene, and tetrachloroethene were less than 8% which is within QC limits.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/4/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA23037

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sulfate

The method blank associated with batches 96075 and 96346 yielded "J" value detections for Sulfate. No corrective action is required as these are estimated values recovered below the LOQ. Associated detections have been qualified with a "B".

Chloride

The method blank associated with batches 96077and 96343 yielded "J" value detections for Chloride. No corrective action is required as these are estimated values recovered below the LOQ. Associated detections have been qualified with a "B".

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: LKH/ 1-23-19 Lot #: UA23037

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

3.2/3.2°C ____/____°C ____/____°C ____/____°C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA26008 Shealy Environmental Services
One groundwater sample analyzed for nitrate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to nitrate analyses.

Method Blank: Nitrate not detected in the method blank.

Trip Blank: A trip blank was not collected with this sample.

Field Blank: A field blank was not collected with this sample.

Equipment Rinse Blank: A rinsate blank was not collected with this sample.

LCS/LCSD: LCS recovery is within QC Limits. LCSD analyses were not performed.

MS/MSD: MS/MSD analyses were not performed using the sample included in this report.

Duplicates: A field duplicate was not collected with this sample.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/6/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA26008

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA25024 Shealy Environmental Services
Five groundwater samples were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blank were free of detections except as follows:

- Sulfate was detected at 0.39 J mg/L and 0.29 J mg/L in sulfate method blanks associated with batches 96346 and 96358, respectively. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in chloride method blanks associated with batches 96343 and 96357. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19102 had a detection of acetone at 3.2 J ug/L. **A "u" qualifier is assigned to acetone in RMW-20B.**

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits except as noted below. LCSD analyses were typically not performed. An LCSD analysis was performed for VOC batch 95972 with recoveries and RPDs within QC limits.

Bromide had a recovery of 151% (well above the QC limit) in the LCS for batch 96341. This LCS is associated with bromide analyses in samples RMW-20A and RMW-20B. Bromide was not detected in these two samples. No qualifiers were assigned.

MS/MSD: RMW-18 and RMW-20B were used for bromide, chloride and sulfate MS/MSD analyses. RMW-20 was also used for bromide MS/MSD analyses. RMW-20A was used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The RMW-18 bromide MSD had a recovery 4% above the upper QC limit. The RMW-18 bromide MS recovery was within QC limits. **A "j" qualifier is assigned to bromide in RMW-18.**

Duplicates: A field duplicate was not collected with these samples.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/6/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA25024

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

Insufficient sample volume was provided to perform matrix spike/matrix spike duplicate (MS/MSD) for analytical batch 95972. An LCS/LCSD was run in lieu of an MS/MSD.

Bromide

The laboratory control sample (LCS) associated with analytical batch 96341 exceeded acceptance criteria for the following analytes: Bromide. These analytes were biased high and were not detected in the samples affected: UA25024-004, UA25024-005.

The continuing calibration verification (CCV) associated with sample UA25024-004 recovered Bromide above the upper control limit. The sample associated with this CCV was non-detect therefore, the data has been reported.

The MSD associated with batch 96359 recovered above method criteria at 114% due to likely matrix interferences. The MS yielded similar recoveries but was marginally within limits at 109%

Chloride

The method blank associated with batch 96343 and 96357 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ.

Sulfate

The method blank associated with batch 96346 and 96358 yielded a "J" value detection for Sulfate. No corrective action is required as this is an estimated value recovered below the LOQ.

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____ _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 2173

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____
Time of preservation _____ . If more than one preservative is needed, please note in the comments below.

Sample(s) _____ _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

SR barcode labels applied by: _____ Date: _____

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA22027 Shealy Environmental Services
Twenty three groundwater samples and one groundwater field duplicate were analyzed for volatile organic compounds (VOCs), chloride, bromide, and sulfate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blank were free of detections except as follows:

- Sulfate was detected at 0.40 J mg/L in the sulfate method blank associated with batch 96075. Except for sulfate in DP-21A, sulfate concentrations in samples associated with batch 96075 were substantially greater than the method blank concentration. No qualifiers were assigned in these cases. The sulfate concentration in DP-21A was 0.51 BJ mg/L which is comparable to the method blank concentration. **A "u" qualifier was assigned to sulfate in DP-21A.**
- Chloride was detected at 0.20 J mg/L in chloride method blanks associated with batches 95708, 96077, and 96080. Most chloride detections associated with batches 95708, 96077, and 96080 were more than 5X the concentration detected in the associated method blank and, therefore, no qualifier was assigned. Samples DP-23A, DP-23B DP-26A, and DP-27A had detections of chloride very close to 4X the associated method blank concentration. **A "u" qualifier was assigned to chloride in samples DP-23A, DP-23B, DP-26A, and DP-27A.**

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC limits except as noted below. LCSD analyses were not performed.

The LCS for VOC batch 95668 had recoveries for cychohexane (CHx) and 1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113) nominally below their respective QC limits.

This LCS is associated with VOC analyses in samples DP-21, DP-23B, DP-24, DP-24A, DP-24B, DP-25, DP-26, DP-26A, DP-26B, DP-27, DP-27A, DP27B and DU-19105. **CFC-113 in DP-27B was assigned a "j" qualifier. CHx in DP-27B is assigned a "uj" qualifier. CHx and CFC-113 were assigned a "uj" qualifier in DP-21, DP-23B, DP-24, DP-24A, DP-24B, DP-25, DP-26, DP-26A, DP-26B, DP-27, DP-27A, and DU-19105.**

MS/MSD: DP-21 and DP-23B were used for chloride MS/MSD analyses. DP-21 and DP-27 were used for bromide and sulfate MS/MSD analyses. DP-21A, DP-22A, and DU-19105 were used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The DP-27 chloride MS and MSD analyses had recoveries below the lower QC limit. The unspiked DP-27 chloride concentration was greater than 4X the spiking concentration. No qualifier was assigned.
- Acetone recovery in the DU-19105 MS was below the lower QC limit. Acetone recovery in the DU-19105 MSD was within the QC limits. **Acetone in DU-19105 was assigned a "uj" qualifier.**

Duplicates: Sample DU-19105 is a field duplicate of DP-20A. RPDs were calculated for analytes detected in both of these samples, namely, bromide, chloride, sulfate, and tetrachloroethene. RPDs were <= 20% and within QC limits except for bromide which had an RPD = 44.2%. Detected bromide concentrations are near the reporting limit of 0.2 mg/L and differ by less than 0.2 mg/L. No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/7/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA22027

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria. The following analytes recovered marginally outside LCS/LCSD criteria: Cyclohexane and Freon 113.

Chloride

The method blank associated with batches 95708, 96077, and 96080 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ. Associated samples have been qualified with a "B".

Sulfate

The method blank associated with batch 96075 yielded a "J" value detection for Sulfate. No corrective action is required as this is an estimated value recovered below the LOQ. Associated samples have been qualified with a "B".

Due to suspected matrix interferences, the MS/MSD assocaited with batch 96079 recovered Sulfate at 83% and 78% respectively.

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

LOQ = Limit of Quantitation
DL = Detection Limit
LOD = Limit of Detection

P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
ND = Not detected at or above the DL

N = Recovery is out of criteria
+ = RPD is out of criteria

Note: Calculations are performed before rounding to avoid round-off errors in calculated results

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: LKH / 1-22-19 Lot #: UA22027

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID:

4.8/4.8 °C ____/____ °C ____/____ °C ____/____ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☐ Yes	☑ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L. (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____

SR barcode labels applied by: LKH Date: 1-22-19

Comments: The last sample listed, "DU-1910$" does not have a collection date nor time on bottles or COC.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA29024 Shealy Environmental Services
One groundwater sample was analyzed for volatile organic compounds (VOCs), chloride, bromide, and sulfate.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: A trip blank was not collected with this sample.

Field Blank: A field blank was not collected with this sample.

Equipment Rinse Blank: A rinsate blank was not collected with this sample.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC limits. LCSD analyses were not performed.

MS/MSD: DP-21B was used for VOC, bromide, chloride, and sulfate MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- Trichlorofluoromethane recovery in the VOC MS was above the upper QC limit. The trichlorofluoromethane RPD was above the QC limit. Trichlorofluoromethane was not detected in the unspiked parent sample. No qualifier was assigned.

Duplicates: A field duplicate was not collected with the sample submitted for analysis.

No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/12/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA29024

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sulfate

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97118. All other quality control standards were analyzed and recover within acceptance criteria. Results will be reported.

Chloride

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97124. All other quality control standards were analyzed and recover within acceptance criteria. Results will be reported.

Bromide

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97125. All other quality control standards were analyzed and recover within acceptance criteria. Results will be reported.

Note: All samples are retained for four weeks from receipt unless other arrangements are made.

LAB USE ONLY
Received on ice (Circle) (Yes) No Ice Pack Receipt Temp. 1.3 °C

DISTRIBUTION: WHITE & YELLOW-Return to laboratory with Sample(s); PINK-Field/Client Copy

Document Number: F-AD-133 Effective Date: 09-01-2014

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: LKH / 1-29-19 Lot #: UA29024

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

1.3 / 1.3 °C ____ / ____ °C ____ / ____ °C ____ / ____ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____.

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA30029 Shealy Environmental Services
Three groundwater samples were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: Trip blank TBLK-19104 had no detections of target analytes.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits.

MS/MSD: RMW-1C was used for nitrate MS/MSD analyses. MS/MSD recoveries and RPD were within QC limits.

Duplicates: A field duplicate was not collected with these samples.

Corrective Action: The report was reissued on 2/12/2019 to correct inaccurate statements in the Case Narrative.

No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/12/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA30029

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sulfate
The continuing calibration verification (CCV) associated with sample -004 and laboratory control sample (LCS) recovered above the upper control limit. The sample associated with this CCV only contained "J" value detections for the affected analytes; therefore, the data has been reported. The opening continuing calibration verification (CCV) of this batch Sulfate eluted outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range.

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97118. All other quality control standards were analyzed and recover within acceptance criteria.

Chloride
The continuing calibration verification (CCV) associated with sample -004 and laboratory control sample (LCS) recovered above the upper control limit. The sample associated with this CCV only contained "J" value detections for the affected analytes; therefore, the data has been reported. The opening continuing calibration verification (CCV) of this batch Chloride eluted outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range.

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97124. All other quality control standards were analyzed and recover within acceptance criteria.

Bromide
The continuing calibration verification (CCV) associated with sample -004 and laboratory control sample (LCS) recovered above the upper control limit. The sample associated with this CCV only contained "J" value detections for the affected analytes; therefore, the data has been reported. The opening continuing calibration verification (CCV) of this batch Bromide eluted outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range.

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97125. All other quality control standards were analyzed and recover within acceptance criteria.

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: ETB / 1-30-19 Lot #: UA30029

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☐ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

1.0 / 1.0 °C ___ / ___ °C ___ / ___ °C ___ / ___ °C

Method: ☐ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☐ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☐ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21713

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # _____.
Time of preservation ___ _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____

SR barcode labels applied by: ETB Date: 1-30-19

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA29023 Shealy Environmental Services
Three groundwater samples and one groundwater field duplicate were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: Trip blank TBLK-19103 had no detections.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-23B was used for bromide, chloride and sulfate MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits.

Duplicates: DU-19103 is a field duplicate of RMW-23. RPDs were calculated for analytes detected in both the parent and field duplicate samples (*i.e.*, bromide, chloride, nitrate, sulfate, acetone, 2-butanone, cis-1,2-dichloroethene, methyl acetate, tetrachloroethene, and trichloroethene). RPDs were less than the QC limit of 25% except for acetone and methyl acetate. Both acetone and methyl acetate had detected concentrations in the parent and field duplicate samples that were either qualified with a lab "J" or within 2X of the LOQ. In these cases, comparison of absolute difference is a better measure of precision than RPD. The measured concentrations for acetone and methyl acetate are comparable (within 2.3 ug/L) between the parent and field duplicate samples. No qualifiers were assigned.

No data qualifiers assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/13/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA29023

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Sulfate

A second pair of matrix spike/matrix spike duplicate (MS/MSD) was not analyzed for analytical batch 97118. All other quality control standards were analyzed and recover within acceptance criteria. Results will be reported.

1,2,4-Trichlorobenzene	120-82-1	8260B	ND		1.0	0.40	ug/L	1
1,1,1-Trichloroethane	71-55-6	8260B	ND		1.0	0.40	ug/L	1
1,1,2-Trichloroethane	79-00-5	8260B	ND		1.0	0.40	ug/L	1
Trichloroethene	79-01-6	8260B	ND		1.0	0.40	ug/L	1
Trichlorofluoromethane	75-69-4	8260B	ND		1.0	0.40	ug/L	1
Vinyl chloride	75-01-4	8260B	ND		1.0	0.40	ug/L	1
Xylenes (total)	1330-20-7	8260B	ND		1.0	0.40	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,2-Dichloroethane-d4		103	70-130
Bromofluorobenzene		98	70-130
Toluene-d8		105	70-130

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 2173

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____. Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB01028 Shealy Environmental Services
Four groundwater samples were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: Trip blank TBLK-19105 had a detection of acetone at 2.6 J ug/L. **A "u" qualifier is assigned to acetone in RMW-06A and RMW-19A.**

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits except as noted below. LCSD analyses were not performed.

Bromomethane, dichlorodifluoromethane, and vinyl chloride had recoveries above the upper QC limit in the LCS associated with batch 96707. These three analytes were reported in association with batch 96707 for sample RMW-19A where they were not detected. No qualifiers were assigned.

MS/MSD: RMW-21A was used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits.

Duplicates: A field duplicate was not collected with these samples.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/13/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB01028

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

The continuing calibration verification (CCV) associated with sample UB01028-004 recovered Bromomethane above the upper control limit. The sample associated with this CCV is non-detect for this compound; therefore, the data has been reported.

The laboratory control sample (LCS) for analytical batch 96707 exceeded acceptance criteria for Bromomethane, Dichlorodifluoromethane and Vinyl Chloride. These analytes were biased high and are not detected in the samples affected: UB01028-004.

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: S IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21713

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

RE: **WPH CLEMSON / 300688.0.0.2**

Pace Workorder: 29330

Dear Lisa Clark:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, January 30, 2019. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 02/12/2019

CERTIFICATE OF ANALYSIS

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: 29330 Pace Analytical Energy Services
Nine groundwater samples and one groundwater field duplicate analyzed for dissolved hydrocarbon gases.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to dissolved hydrocarbon gas analyses.

Method Blank: Hydrocarbon gases were not detected in the method blanks.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS and LCSD recoveries as well as RPDs are within QC Limits.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: DU-19101 is a field duplicate of RMW-27. Methane, ethane, and ethane were detected in both the parent and field duplicate samples. RPDs for these three analytes were 15.4% or less. RPDs were within QC limits.

No data qualifiers were assigned.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 29330 WPH CLEMSON / 300688.0.0.2

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB06056 Shealy Environmental Services
Six groundwater samples and one equipment rinse blank were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blank were free of detections except as follows:

- 1,2,4-Trichlorobenzene was detected at 0.42 J mg/L in the VOC method blank associated with batch 97430. 1,2,4-Trichlorobenzene was not detected in samples included in this report. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in chloride method blank associated with batch 97298. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19107 had no reported detections of VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: Equipment rinse blank RBLK-19101 had no reported detections of VOCs or targeted anions.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits except as noted below. LCSD analyses were not performed.

Bromomethane had a recovery above the upper QC limit in the VOC LCS for batch 97215. This LCS is associated with bromomethane analysed in sample TBLK-19107 where it was not detected. No qualifiers were assigned.

MS/MSD: RMW-21 was used for bromide, chloride, and sulfate MS/MSD analyses. RBLK-19101 was used for nitrate MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The RMW-21 sulfate MS and MSD had recoveries below the lower QC limit. **Sulfate in RMW-21 is assigned a "j" qualifier.**

Duplicates: A field duplicate was not collected with these samples.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/18/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB06056

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

The laboratory control sample (LCS) for analytical batch 97215 exceeded acceptance criteria for Bromomethane. This analyte is biased high but was not detected in the samples affected.

The method blank associated with batch 97298 yielded a "J" value detection for 1,2,4-Trichlorobenzene. No corrective is required as this is an estimated value recovered below the LOQ. All associated detections have been qualified with a "B".

Chloride

The method blank associated with batch 97298 yielded a "J" value detection for Chloride. No corrective is required as this is an estimated value recovered below the LOQ. All associated detections have been qualified with a "B".

Sulfate

The MS/MSD assocaited with batch 97313 yielded recoveries outside of method criteria at 77% and 88% respectively due to suspected matrix interferences.

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☑ No	☐ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____. Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UA31024 Shealy Environmental Services
Five groundwater samples were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of anion and VOC detections.

Trip Blank: Trip blank TBLK-19104 had a detection of carbon disulfide at 0.67 J ug/L. Carbon disulfide was not detected in the groundwater samples. No data qualifiers were assigned.

Field and Equipment Rinse Blanks: Neither a field blank nor an equipment rinse blank were collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits.

MS/MSD: RMW-10 and RMW-17A were used VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The RMW-10 VOC MS had the following analytes recovered above the upper QC limit: Acetone, carbon disulfide (CS), 1,1-dichloroethane (1,1-DCA), 1,1-dichloroethene (1,1-DCE), trans-1,2-dichloroethane (t-1,2-DCE), methyl tertiary butyl ether (MTBE), methylene chloride (MC), 1,1,2-trichloro-1,2,2-trifluoroethane (TCTFA), trichlorofluoromethane (TCFM), and vinyl chloride (VC). The RPDs for acetone, chloromethane (CM), and vinyl chloride were above the QC limit. CS, 1,1-DCA, 1,1-DCE. t-1,2-DCE, MTBE, MC, TCTFA, TFCM, VC, and CM were not detected in the groundwater samples included in this report; therefor, no qualifiers were assigned to these compounds. **A "j" qualifier is assigned to acetone in RMW-10, RMW-14, and RMW-17.**

Duplicates: A field duplicate was not collected with these samples.

Corrective Action: Lab was asked to revise the report to include the missing cover page.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/18/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UA31024

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Bromide

The continuing calibration verification (CCV) associated with sample -005 recovered Bromide above the upper control limit. The sample associated with this CCV yielded only a "J" value detection; therefore, the data has been reported.

In the opening continuing calibration verification (CCV) associated with samples -005 and -006 the target analytes elute outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range. Results will be reported.

Sulfate

In the opening continuing calibration verification (CCV) associated with samples -005 and -006 the target analytes elute outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range. Results will be reported.

Chloride

In the opening continuing calibration verification (CCV) associated with samples -005 and -006 the target analytes elute outside of the acceptable retention time windows. The remaining CCV retention times are within acceptance range. Results will be reported.

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

Xylenes (total)	1330-20-7	8260B	ND		10	4.0	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,2-Dichloroethane-d4		101	70-130
Bromofluorobenzene		127	70-130
Toluene-d8		90	70-130

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

QC Summary

Inorganic non-metals - MB

Sample ID: UQ96321-001
Batch: 96321
Analytical Method: 353.2

Matrix: Aqueous

Parameter	Result	Q	Dil	LOQ	DL	Units	Analysis Date
Nitrate - N	ND		1	0.020	0.0015	mg/L	01/31/2019 2228

LOQ = Limit of Quantitation
DL = Detection Limit
LOD = Limit of Detection

P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
ND = Not detected at or above the DL

N = Recovery is out of criteria
+ = RPD is out of criteria

Note: Calculations are performed before rounding to avoid round-off errors in calculated results

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB08023 Shealy Environmental Services
Three groundwater samples were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections except as follows:

- Sulfate was detected at 0.29 J mg/L sulfate method blank associated with batch 97605. A comparable concentration (*i.e.*, within 5X the concentration in the method blanks) was detected in groundwater sample RMW-05A. **A "u" qualifier was assigned to sulfate in RMW-05A.**
- Chloride was detected at 0.20 J mg/L in chloride method blank associated with batch 97603. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- 1,2,4-Trichlorobenzene was detected at 0.42 J ug/L in the method blank associated with batch 97430. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19102 had a detection of acetone at 2.6 J ug/L. There are detections of acetone in RMW-05A and RMW-24 within 10X the acetone concentration in TBLK-19102 which could be assigned a "u" qualifier. The data reviewer chose to not add a "u" qualifier to these acetone detections.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-05A were used for nitrate MS/MSD analyses. RMW-24 was used for bromide and VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The RMW-24 MSD had a recovery of carbon tetrachloride that was 2% above the upper QC limit. Carbon tetrachloride was not detected in the unspiked RMW-24 parent sample. No qualifier was assigned.

Duplicates: A field duplicate was not collected with these samples.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/19/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB08023

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Chloride

The method blank associated with batch 97603 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

Sulfate

The method blank associated with batch 97605 yielded a "J" value detection for Sulfate. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

VOCs by GC/MS

The method blank associated with batch 97430 yielded a "J" value detection for 1,2,4-Trichlorobenzene. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

The MSD associated with batch 97430 recovered Carbon Tetrachloride marginally above method criteria likely due to matrix interferences. The MS recovered within method criteria at 115%.

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

RE: **WPH CLEMSON / 300688.0.0.2**

Pace Workorder: 29364

Dear Lisa Clark:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, February 01, 2019. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 02/14/2019

CERTIFICATE OF ANALYSIS

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: 29364 Pace Analytical Energy Services
Twelve groundwater samples and one groundwater field duplicate analyzed for dissolved hydrocarbon gases.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to dissolved hydrocarbon gas analyses.

Method Blank: Hydrocarbon gases were not detected in the method blank.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS and LCSD recoveries as well as RPDs are within QC Limits.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: DU-19103 is a field duplicate of RMW-23. Methane, ethane, and ethene were detected in both the parent and field duplicate samples. RPDs for methane and ethane were 14.3% or less. The RPD for ethene was 53.6%; however, the ethene concentrations are near the PQL of 0.10 ug/L. The difference between ethene in the parent and field duplicate samples is 0.1 ug/L. Ethene concentrations in the parent and field duplicate samples are comparable. No qualifiers were assigned.

No data qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/18/2019

ANALYTICAL RESULTS QUALIFIERS

Workorder: 29364 WPH CLEMSON / 300688.0.0.2

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

RE: **WPH CLEMSON**

Pace Workorder: 29439

Dear Lisa Clark:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, February 08, 2019. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 02/21/2019

CERTIFICATE OF ANALYSIS

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: 29439 Pace Analytical Energy Services
Seventeen groundwater samples and two groundwater field duplicates analyzed for dissolved hydrocarbon gases.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: Surrogate recoveries are not applicable to dissolved hydrocarbon gas analyses.

Method Blank: Hydrocarbon gases were not detected in the method blanks.

Trip Blank: A trip blank was not collected with these samples.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS and LCSD recoveries as well as RPDs are within QC Limits.

MS/MSD: MS/MSD analyses were not performed using samples included in this report.

Duplicates: DU-19102 is a field duplicate of RMW-13, and DU-19104 is a field duplicate of RMW-09. Ethene was detected in both DU-19102 and RMW-13 with an RPD of 77.9% which is above the QC limit. **Ethene concentrations in DU-102 and RMW-13 were assigned a "j" qualifier.** Methane and ethane were not detected in DU-19102 and RMW-13. Neither methane, ethane, nor ethene were detected in DU-19104 or RMW-09.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 29439 WPH CLEMSON

DEFINITIONS/QUALIFIERS

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

Hi Lisa

We received the samples for the project above. During login the following was noted:

1. RMW-20: vials ID was RMW-20C. Please confirm the correct sample ID.

2. Samples 13-19: no date and time on the COC, they were taken from the vials. Please confirm this information.

Emma

RMW-20C is the correct sample ID

All the info you listed for dates and time for 13 through 19 is correct.

Thank you

Benjamin J Medlin

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB05042 Shealy Environmental Services
Eleven groundwater samples and one groundwater field duplicate were analyzed for one or more of volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chains of custody (CoCs) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: Trip blank TBLK-19106 had a detection of acetone at 2.3 J ug/L. **A "u" qualifier is assigned to acetone in DG-01, DG-03D, DG-05, and MG-05 because these samples had detected acetone concentrations comparable to that in the trip blank.**

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits except as noted below. LCSD analyses were not performed.

- Bromomethane was recovered above the upper QC limit in batches 97102 and 97215. Bromomethane was not detected in the samples reported. No qualifiers were assigned.

MS/MSD: RMW-13 were used for bromide and chloride MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits.

Duplicates: DU-19102 is a field duplicate of RMW-13. Calculated RPDs for bromide, chloride, nitrate, sulfate, and tetrachloroethene were 8.7% or less which is within the QC limit.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/25/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB05042

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

The continuing calibration verification (CCV) and LCS associated with batch 97102 recovered Bromomethane above the upper control limit. The samples associated with this CCV/LCS were non-detect for the affected analytes; therefore, the data has been reported.

The laboratory control sample (LCS) associated with batch 97215 exceeded acceptance criteria for Bromomethane. This analyte is biased high but is not detected in the samples affected.

Nitrate

Sample -010 is a blind duplicate and therefore does not have a collection date or collection time on the COC. The date has been set to 02/04/19 as this is the date of the earliest Nitrate sample. A time has not been reported. This sample was performed within hold time if it was collected after 02/04/19 at 0247.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB07081 Shealy Environmental Services
Eight groundwater samples and one groundwater field duplicate were analyzed for volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections except as follows:

- Nitrate was detected at 0.0017 J mg/L in the nitrate method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- Sulfate was detected at 0.29 J mg/L in the sulfate method blank. RMW-10A had sulfate detected at 1.3 mg/L. This result is within 5X the concentration in the method blank and may thereby be considered a comparable concentration; however, the data reviewer opted to not assign a qualifier to this result. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in the chloride method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- 1,2,4-Trichlorobenzene was detected at 0.42 J ug/L in the VOC method blank for batch 97430. 1,2,4-Trichlorobenzene was not detected in samples included in this report. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19108 had no detections of reported VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits.

MS/MSD: RMW-10B was used for nitrate MS/MSD analyses. DU-19104 was used for bromide, chloride and sulfate MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- RMW-10B nitrate MS and MSD recoveries were below the lower QC limit. **A "j" qualifier was assigned to nitrate in RMW-10B.**

Duplicates: DU-19104 us a field duplicate of RMW-09. Calculated RPDs for bromide, chloride, nitrate, cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene were 23.5% or less which is within QC limits. The calculated RPD for sulfate was 32.6% which is above the QC limit. **A "j" qualifier is assigned to sulfate in RMW-09 and DU-19104.**

Other: The CoC is incorrect in requesting anions (bromide, chloride, nitrate, and sulfate) for sample RMW-22. The sampling program did not intend to sample anions in this sample.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/25/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB07081

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

Sample -006 was received preserved with HCl, however, a pH test yielded a value greater than 2. No corrective action is required as this sample has been analyzed on the 7th day after collection.

The method blank associated with batch 97430 yielded a "J" value detection for 1,2,4-Trichlorobenzene. No corrective action is required as this is an estimated value recovered below the LOQ.

Nitrate

The method blank associated with batch 96954 yielded a "J" value detection for Nitrate. No corrective action is required as this is an estimated value recovered below the LOQ.

Due to suspected matrix interferences, the MS/MSD recovered marginally below method criteria at 87% and 84% respectively.

Sample -010 is a blind duplicate and therefore does not contain the collection date or time on the COC. The collection date has been reported as 02/06/19 as all other samples on the COC werecollected on this date. No time has been reported for this sample. The analysis for nitrate has been done in hold if the sample was collected at or after 02/06/19 at 0940.

Chloride

The method blank associated with batch 97603 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ.

Sulfate

The method blank associated with batch 97605 yielded a "J" value detection for Sulfate. No corrective action is required as this is an estimated value recovered below the LOQ.

Methyl tertiary butyl ether (MTBE)	1634-04-4	8260B	ND		1.0	0.40	ug/L	1
4-Methyl-2-pentanone	108-10-1	8260B	ND		10	2.0	ug/L	1
Methylcyclohexane	108-87-2	8260B	ND		5.0	0.40	ug/L	1
Methylene chloride	75-09-2	8260B	ND		1.0	0.40	ug/L	1
Styrene	100-42-5	8260B	ND		1.0	0.41	ug/L	1
1,1,2,2-Tetrachloroethane	79-34-5	8260B	ND		1.0	0.40	ug/L	1
Tetrachloroethene	127-18-4	8260B	190		1.0	0.40	ug/L	1
Toluene	108-88-3	8260B	ND		1.0	0.40	ug/L	1
1,1,2-Trichloro-1,2,2-Trifluoroethane	76-13-1	8260B	ND		1.0	0.42	ug/L	1
1,2,4-Trichlorobenzene	120-82-1	8260B	ND		1.0	0.40	ug/L	1
1,1,1-Trichloroethane	71-55-6	8260B	ND		1.0	0.40	ug/L	1
1,1,2-Trichloroethane	79-00-5	8260B	ND		1.0	0.40	ug/L	1
Trichloroethene	79-01-6	8260B	1.4		1.0	0.40	ug/L	1
Trichlorofluoromethane	75-69-4	8260B	ND		1.0	0.40	ug/L	1
Vinyl chloride	75-01-4	8260B	ND		1.0	0.40	ug/L	1
Xylenes (total)	1330-20-7	8260B	ND		1.0	0.40	ug/L	1

Surrogate	Q	Run 1 % Recovery	Acceptance Limits
1,2-Dichloroethane-d4		111	70-130
Bromofluorobenzene		109	70-130
Toluene-d8		95	70-130

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: [illegible] / 2-7-19 Lot #: 180 7081

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

2.8 / 2.8 °C ___ / ___ °C ___ / ___ °C ___ / ___ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☑ Yes	☐ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21715

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____ mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

SR barcode labels applied by: [signature] Date: 2-7-19

Comments:
15) "RMW22" Cl, SO4/Br + Nitrate bottles not received

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB13091 Shealy Environmental Services
Eight groundwater samples were analyzed for one or more of volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blank were free of detections except as follows:

- Nitrate was detected at 0.0022 J mg/L in the nitrate method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in the chloride method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19111 had no detections of reported VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: MS/MSD analyses were not performed using samples included in his report.

Duplicates: A field duplicate was not collected with these samples.

No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/25/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB13091

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Nitrate

The method blank associated with batch 97500 yielded a "J" value detection for Nitrate. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

Chloride

The method blank associated with batch 97871 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

Sample Receipt Checklist (SRC)

Client: TRC Cooler Inspected by/date: ETB / 2.13.19 Lot #: UB13091

Means of receipt: ☑ SESI ☐ Client ☐ UPS ☐ FedEx ☐ Other: _____

☐ Yes	☑ No		1. Were custody seals present on the cooler?
☐ Yes	☐ No	☑ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: _____ Chlorine Strip ID: _____ Tested by: _____

Original temperature upon receipt / Derived (Corrected) temperature upon receipt: %Solid Snap-Cup ID: _____

1.4 / 1.4 °C ___ / ___ °C ___ / ___ °C ___ / ___ °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 2717

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with _____mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # _____ _____.
Time of preservation _____. If more than one preservative is needed, please note in the comments below.

Sample(s) _____ were received with bubbles >6 mm in diameter.

Samples(s) _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: _____.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB14038 Shealy Environmental Services
Three groundwater samples were analyzed for one or more of volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank and one equipment rinse blank were analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections except as follows:

- Nitrate was detected at 0.0018 J mg/L in the nitrate method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.
- Chloride was detected at 0.20 J mg/L in the chloride method blank. Comparable concentrations (*i.e.*, within 5X the concentration in the method blanks) were not detected in the groundwater samples. No qualifiers were assigned.

Trip Blank: Trip blank TBLK-19112 had no detects of reported VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: Rinsate blank RBLK-19102 had no detects of reported VOCs.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-29 was used for bromide, chloride and sulfate MS/MSD analyses. RMW-02 was used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits.

Duplicates: A field duplicate was not collected with these samples.

No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/25/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB14038

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Nitrate

The method blank associated with batch 97619 yielded a "J" value detection for Nitrate. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

Chloride

The method blank associated with batch 97871 yielded a "J" value detection for Chloride. No corrective action is required as this is an estimated value recovered below the LOQ. Associated detections have been qualified with a "B".

☐ Yes	☐ No	☑ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/l. (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Laboratory Data Quality Review Notes

Project Name: WPH-Clemson, SC

Project Number: 300688.0000.0000.000002

Lab Report: UB12030 Shealy Environmental Services
Nine groundwater samples were analyzed for one or more of volatile organic compounds (VOCs), chloride, bromide, sulfate, and nitrate. One trip blank was analyzed for VOCs.

Chain of Custody, Sample Temperature, Sample Preservation: Chain of custody (CoC) signed; sample temperature <6 ^{o}C upon arrival at the laboratory; samples were preserved properly.

Hold Time: Samples analyzed within hold time.

Surrogates: VOC surrogate recoveries are within QC limits.

Method Blank: Method blanks were free of detections.

Trip Blank: Trip blank TBLK-19110 had no detected VOCs.

Field Blank: A field blank was not collected with these samples.

Equipment Rinse Blank: A rinsate blank was not collected with these samples.

LCS/LCSD: LCS recoveries for anions and VOCs are within QC Limits. LCSD analyses were not performed.

MS/MSD: RMW-13A was used for nitrate MS/MSD analyses. RMW-28B was used for bromide, chloride and sulfate MS/MSD analyses. RMW-16A and RMW-28B were used for VOC MS/MSD analyses. MS/MSD recoveries and RPDs were within QC limits except as follows:

- The RMW-16A MS and MSD bromomethane recoveries were above the upper QC limit. The RMW-16A MS trichlorofluoromethane recovery was above the upper QC limit. Bromomethand and trichlorofluoromethane were not detected in RMW-16A. No qualifiers were assigned.

Duplicates: A field duplicate was not collected with these samples.

No qualifiers were assigned.

Data review performed by: Terry Hertz; TRC Environmental Corp.; 2/26/2019

Case Narrative
TRC Companies, Inc.
Lot Number: UB12030

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

VOCs by GC/MS

The MS/MSD associated with batch 97749 recovered Bromomethane above method criteria at 159% and 141% respectively due to suspected matrix interferences. All associated samples are non-detect for this compound. In addition the MS associated with this batch recovered Trichlorofluoromethane above method criteria at 131%. The associated MSD recovered within method criteria at 115% for this compound. The spiked sample is non-detect for this compound and only one "J" detection was yielded from this batch for Trichlorofluoromethane.

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL

Sample ID: UB12030-005MD
Batch: 97749
Analytical Method: 8260B

Matrix: Aqueous
Prep Method: 5030B

Parameter	Sample Amount (ug/L)	Spike Amount (ug/L)	Result (ug/L)	Q	Dil	% Rec	% RPD	% Rec Limit	% RPD Limit	Analysis Date
Acetone	ND	10000	10000		100	100	3.7	60-140	20	02/16/2019 0734
Benzene	ND	5000	4800		100	95	0.46	70-130	20	02/16/2019 0734
Bromodichloromethane	ND	5000	4500		100	91	0.077	70-130	20	02/16/2019 0734
Bromoform	ND	5000	4800		100	96	5.7	70-130	20	02/16/2019 0734
Bromomethane (Methyl bromide)	ND	5000	7000	N	100	141	12	70-130	20	02/16/2019 0734
2-Butanone (MEK)	ND	10000	9300		100	93	4.4	70-130	20	02/16/2019 0734
Carbon disulfide	ND	5000	4100		100	83	3.0	70-130	20	02/16/2019 0734
Carbon tetrachloride	ND	5000	5100		100	101	1.3	70-130	20	02/16/2019 0734
Chlorobenzene	ND	5000	4900		100	99	1.5	70-130	20	02/16/2019 0734
Chloroethane	ND	5000	5700		100	115	11	70-130	20	02/16/2019 0734
Chloroform	ND	5000	4600		100	91	0.42	70-130	20	02/16/2019 0734
Chloromethane (Methyl chloride)	ND	5000	5300		100	105	5.6	60-140	20	02/16/2019 0734
Cyclohexane	ND	5000	5200		100	104	0.66	70-130	20	02/16/2019 0734
1,2-Dibromo-3-chloropropane (DBCP)	ND	5000	4900		100	97	0.87	70-130	20	02/16/2019 0734
Dibromochloromethane	ND	5000	4700		100	94	2.3	70-130	20	02/16/2019 0734
1,2-Dibromoethane (EDB)	ND	5000	4900		100	97	0.22	70-130	20	02/16/2019 0734
1,2-Dichlorobenzene	ND	5000	4700		100	93	2.1	70-130	20	02/16/2019 0734
1,3-Dichlorobenzene	ND	5000	4700		100	94	0.47	70-130	20	02/16/2019 0734
1,4-Dichlorobenzene	ND	5000	4800		100	96	2.8	70-130	20	02/16/2019 0734
Dichlorodifluoromethane	ND	5000	5300		100	105	7.6	60-140	20	02/16/2019 0734
1,1-Dichloroethane	ND	5000	4600		100	92	0.76	70-130	20	02/16/2019 0734
1,2-Dichloroethane	ND	5000	4700		100	95	0.66	70-130	20	02/16/2019 0734
1,1-Dichloroethene	ND	5000	4600		100	93	2.5	70-130	20	02/16/2019 0734
cis-1,2-Dichloroethene	ND	5000	4400		100	89	3.1	70-130	20	02/16/2019 0734
trans-1,2-Dichloroethene	ND	5000	4500		100	91	0.18	70-130	20	02/16/2019 0734
1,2-Dichloropropane	ND	5000	4100		100	83	0.036	70-130	20	02/16/2019 0734
cis-1,3-Dichloropropene	ND	5000	4100		100	81	0.95	70-130	20	02/16/2019 0734
trans-1,3-Dichloropropene	ND	5000	4000		100	80	0.31	70-130	20	02/16/2019 0734
Ethylbenzene	ND	5000	5000		100	99	1.7	70-130	20	02/16/2019 0734
2-Hexanone	ND	10000	10000		100	101	6.2	70-130	20	02/16/2019 0734
Isopropylbenzene	ND	5000	4900		100	97	0.57	70-130	20	02/16/2019 0734
Methyl acetate	ND	5000	4400		100	89	1.6	70-130	20	02/16/2019 0734
Methyl tertiary butyl ether (MTBE)	ND	5000	4400		100	89	1.8	70-130	20	02/16/2019 0734
4-Methyl-2-pentanone	ND	10000	9700		100	97	3.5	70-130	20	02/16/2019 0734
Methylcyclohexane	ND	5000	5000		100	100	1.7	70-130	20	02/16/2019 0734
Methylene chloride	ND	5000	4500		100	89	5.2	70-130	20	02/16/2019 0734
Styrene	ND	5000	4800		100	97	0.23	70-130	20	02/16/2019 0734
