RE: WestPoint Home – former Clemson Plant
Site ID # 00895
Consent Agreement #06-163-W
July 8, 2008 Results for Lake Hartwell Transition Zone Sampling

Dear Mr. Richmond:

Philip Industrial Outsourcing, LP. (PSC), on behalf of WestPoint Home (WPH), is transmitting information concerning Lake Hartwell transition zone sampling for the former Clemson Plant. Please transmit this information to Mike Rivers of the Bureau of Water. This letter transmits the new sampling results collected July 8, 2008 and compares the results to the previous sampling events in 2007 and May/June 2008.

Previous Sample Results

2007 Sampling Results

In May 29, 2007, PSC transmitted the initial report on transition zone sampling to DHEC. The sampling was subcontracted to Rogers & Callcott. The results of the five samples collected were all less than the detection limit for all volatile organic compounds, and specifically less than 5 ug/L for tetrachloroethylene (PCE). During this sampling event, the samplers were installed over a period from February 27, 2007 to April 24, 2007. During this period the lake level rose several feet due to the winter rainfall. The report describes the sampling protocol used for all sampling events.

2008 Sampling

DHEC requested the transition zone sampling be repeated in 2008. The results of the sampling performed in May 2008 was again subcontracted to Rogers & Callcott and lab results were provided to PSC on June 12, 2008. The approach to the sampling followed the same protocols as the 2007 sampling. The conditions of Lake Hartwell were declining during the recent event as compared to the significant rise during the 2007 sampling event. This may have had an effect on the sample results. Sample locations moved slightly as shown on draft figures included in this letter. A full report was sent to DHEC on June 19, 2008.

A30

Samples Results – Initial Installation May 7, 2008 – Retrieved May 28, 2008

The PCE sample results for the five diffusion samplers were as follows:

- DS-1 – 95 ug/L;
- DS-2 – 7.9 ug/L (note sampler had been disturbed);
- DS-3 – 100 ug/L;
- DS-4 – 17 ug/L; and
- DS-5 – <5 ug/L.

Recent Samples Results – Initial Installation June 17, 2008 – Retrieved July 8, 2008

Since the second sampling event produced results that varied dramatically with the 2007 sampling event, WPH requested that they be allowed to resample to confirm the results. The report for this sampling period is being transmitted with this letter. The sampling locations included two additional locations, DS-6 and DS-7, located to the west of the previous DS-1 thru 5, which were in the same location as the previous sampling event. The new locations were added to evaluate the full width of the area of detections with the diffusion samplers, since the previous results did not determine the edge of the plume on one end. In addition, two surface water grab samples were collected at the previous highest diffusion sampler location.

The PCE sample results for the five diffusion samplers were as follows:

- DS-1 – <5 ug/L;
- DS-2 – 500 ug/L;
- DS-3 – <5 ug/L;
- DS-4 – 32 ug/L;
- DS-5 – 8.6 ug/L;
- DS-6 – 19 ug/L; and
- DS-7 – 67 ug/L.

There are significant variations in sample concentrations for the same sample locations for the two dates measured. Also the edge of the detected PCE plume is undefined to the detection limit of 5 ug/L beyond the sample location at DS-7.

One of the two surface water samples also detected PCE at 8 ug/L. Low levels of PCE degradation products were detected at DS-2. A lab split (with Accutest) for sample DS-3 had similar results.

Lake levels dropped about 1. 5 feet during the sampling interval but the samplers were still submerged.

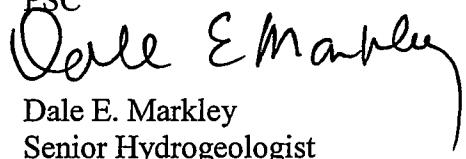

Conclusions

Both sampling events in 2008 indicate a zone of elevated PCE in the diffusion samplers. Interpretation of this data by PSC indicates an upgradient groundwater source since well sample results directly upgradient have similar results. The width of the diffusion zone at the edge of the lake receiving discharge is estimated to be approximately 200 to 250 feet and it is likely to vary seasonally with the interaction of lake level changes. PSC is collecting groundwater sample data in July to evaluate the concentrations in existing saprolite and bedrock wells within 300 feet of the lake shore and also in several new wells (installed in July) at 75 feet in depth in the deep saprolite zone.

Please advise me if you have any questions by contacting me at (618) 281-1540.

Sincerely,

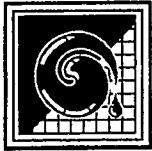

PSC

Dale E. Markley
Senior Hydrogeologist

Subject: **Confirmation Transition Zone Sampling Results**
WestPoint Home Plant - Clemson, SC
Rogers & Callcott Project Number 07-048

Dear Mr. Markley:

Rogers & Callcott Engineers, Inc. completed the diffusion sampling and analysis services at the above referenced Site in Clemson, SC. The objective of this sampling event was to confirm the presence of previously identified constituents in the transition zone between groundwater and surface water near the shoreline of Lake Hartwell. Sampling was conducted using diffusion samplers as described in the revised cost estimate submitted to you on July 2, 2008.

Seven diffusion samples (DS-1 6-08 through DS-7 6-08), two surface water samples (SW-2 and SW@DS-3), and one duplicate diffusion sample (DS-3 6-08 Duplicate) were collected at various locations (see attached figure). In addition, one equipment blank (diffusion blank) was collected for quality control purposes. Sample locations were selected by Phillip Environmental Services Corporation (PSC) personnel, and were based on the close proximity of monitoring well DG-6 (located approximately 100 feet from the shoreline). The diffusion sampler locations depicted on the figure are approximations with accuracies of 10 to 20 feet (+/-).

The diffusion samplers were installed on June 17, 2008 in approximately 1.5-2.0 feet of water. The samplers were emplaced within the sediment of the lake bed to an estimated depth of 12 to 14 inches below the lake bottom. DS locations were marked with a

wooden stake and tethered to another stake on the shore for retrieval purposes. The diffusion blank was stored at Rogers & Callcott Laboratory during the equilibration period.

The diffusion samplers were allowed to equilibrate for twenty-one days following installation. On July 8, 2008, the samplers were retrieved and submitted to Rogers & Callcott Laboratory for the analysis of volatile organic compounds (VOCs) by EPA Method 8260. (A duplicate sample DS-3 6-08 Duplicate was shipped on July 8, 2008 to Accutest Laboratories for VOC analysis).

During the twenty-one day equilibration period, the lake water level dropped 1.84 feet as reported by the USGS. None of the sample locations were dry despite this drop in water level.

VOCs were detected in five of the seven diffusion samples obtained from the Lake Hartwell shoreline. No VOCs were detected in DS-1 6-08, DS-3 6-08, and the diffusion blank. Tetrachloroethene (PCE) was detected in five of the samples: DS-2 6-08 at 500 µg/L, DS-4 6-08 at 32 µg/L, DS-5 6-08 at 8.6 µg/L, DS-6 6-08 at 19 µg/L, and DS-7 6-08 at 67 µg/L. Trichloroethene was detected in DS-2 6-08 at a concentration of 7.6 µg/L. Cis-1,2-Dichloroethene (cis-1,2-DCE) was detected in DS-2 6-08 at a concentration of 9.6 µg/L. Trichlorofluoromethane (TCFM) was detected in DS-2 6-08 at 7.6 µg/L, DS-4 6-08 at 23 µg/L, and DS-5 6-08 at 47 µg/L. At present, there is no maximum contaminant level (MCL) for TCFM. Analytical results are summarized in Table 1.

As stated, DS-3 6-08 contained no VOCs; however, a duplicate sample (DS-3 6-08 Duplicate) submitted to Accutest Laboratories contained concentrations of PCE at 0.23 µg/L, cis-1,2-DCE at 0.59 µg/L, and vinyl chloride at 2.7 µg/L. Sample DS-3 6-08 Duplicate reported detection limits (RDL) for the aforementioned constituents were 5 µg/L, 5 µg/L, and 2 µg/L, respectively. These RDLs are equal to or less than the MCLs for TCE (5 µg/L), cis-1,2-DCE (70 µg/L), and vinyl chloride (2 µg/L).

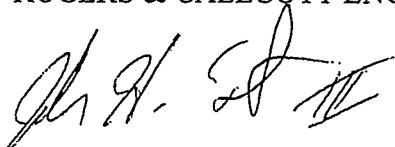

Mr. Dale E. Markley
WestPoint Home Plant, Clemson, SC
July 17, 2008
Page 3

Surface water sample SW @ DS-3 contained PCE at a concentration of 8.0 µg/L. No VOCs were detected in SW-2; however, SW-2 was a discrete sample that was collected from the bottom of the lake bed. SW-2 was obtained by submerging a closed glass jar to the bottom of the lake bed, and then opening the jar to collect the sample. The air in the jar was released as water filled the jar, and the lid was replaced underwater and brought to the surface. The sample was then decanted to preserved 40 ml glass vials. This sample was briefly in contact with the escaping air, which may have removed VOCs that were potentially present.

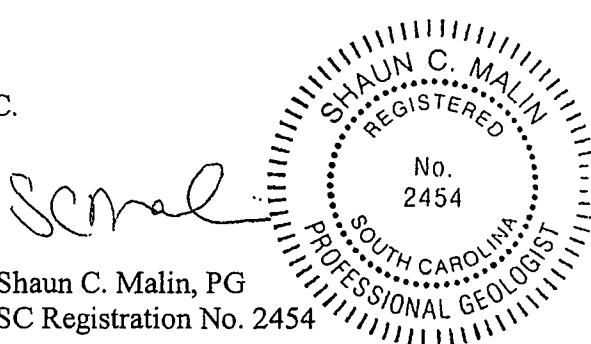

Thank you for using Rogers & Callcott Engineers, Inc. for your environmental and laboratory services. Please contact us at 864-232-1556 if you have any questions or require additional information.

Sincerely,

ROGERS & CALLCOTT ENGINEERS, INC.

Laboratory Services Report

Client: PSC
Attn John Foster
Rogers and Callcott

Date Received: 07/08/2008

South Carolina Laboratory Identification 23105

Time Received: 15:50

North Carolina Laboratory Certificate Number 27

Date Reported: 07/15/2008

NELAP Laboratory Identification E87822

Sample Number

Sample Description

	AC37163	PSC DS-1 6-08 grab, collected on 07/08/2008 at 13:35
	AC37164	PSC DS-6 6-08 grab, collected on 07/08/2008 at 13:43
	AC37165	PSC DS-7 6-08 grab, collected on 07/08/2008 at 13:48
	AC37166	PSC SW-2 grab, collected on 07/08/2008 at 14:50
	AC37167	PSC Diffusion Blank grab, collected on 07/08/2008 at 16:00

The attached report is for the samples that were received and are referenced above. Rogers and Callcott maintains a formal QA/QC program. Unless otherwise noted, all analyses performed under NELAP certification have complied with all the requirements of the NELAC standard. The analyses met the QA/QC confidence interval for each test method unless otherwise qualified. Estimated uncertainty available upon request.

We appreciate the opportunity to be of service to you. Please contact us at (864) 232-1556 should you have any questions about this report.

Date Received: 07/08/2008

South Carolina Laboratory Identification 23105

Time Received: 15:50

North Carolina Laboratory Certificate Number 27

Date Reported: 07/18/2008

NELAP Laboratory Identification E87822

Sample Number

AC37804 PSC DS-3 6-08 duplicate vial AC37160 grab, collected on 07/08/2008 at 13:10

Sample Description

of orig mat

R&C Sample

The attached report is for the samples that were received and are referenced above. Rogers and Callcott maintains a formal QA/QC program. Unless otherwise noted, all analyses performed under NELAP certification have complied with all the requirements of the NELAC standard. The analyses met the QA/QC confidence interval for each test method unless otherwise qualified. Estimated uncertainty available upon request.

We appreciate the opportunity to be of service to you. Please contact us at (864) 232-1556 should you have any questions about this report.

Revised Laboratory Services Report

Client: PSC **07/18/2008**
Attention: Dale Markley
210 West Sand Bank Road
Columbia Illinois 62236

Date Received: 07/08/2008 **South Carolina Laboratory Identification 23105**
Time Received: 15:50 **North Carolina Laboratory Certificate Number 27**
Original Date Reported: 07/17/2008 **NELAP Laboratory Identification E87822**

<i>Sample Number</i>	<i>Sample Description</i>
	AC37118 PSC DS-3 06-08 Duplicate grab, collected on 07/08/2008 at 13:15

This is a revised report. Please disregard any previous reports for these samples which have an earlier reporting date.

The attached report is for the samples that were received and are referenced above. Rogers and Callcott maintains a formal QA/QC program. Unless otherwise noted, all analyses performed under NELAP certification have complied with all the requirements of the NELAC standard. The analyses met the QA/QC confidence interval for each test method unless otherwise qualified. Estimated uncertainty available upon request.

We appreciate the opportunity to be of service to you. Please contact us at (864) 232-1556 should you have any questions about this report.

EXPLANATION OF REPORT SYMBOLS AND ABBREVIATIONS

The following defines common symbols and abbreviations used in reporting technical data:

<	Less than
>	Greater than
mg/L, mg/kg	Units of concentration in milligrams per liter for liquids, and milligrams per kilogram for solids. Also referred to as parts per million or "ppm".
µg/L, µg/kg	Units of concentration in micrograms per liter for liquids, and micrograms per kilogram for solids. Also referred to as parts per billion or "ppb".
RDL	Reported detection limit
CFU	Colony forming unit
TNTC	Too numerous to count
MSL	Mean sea level
NTU	Nephelometric turbidity units
µmhos/cm	Units of specific conductance expressed in micromhos per centimeter
°C , °F	Units of temperature expressed in degrees Celsius or degrees Fahrenheit.
mgd, gpd	Measure of flow in million gallons per day (mgd) or gallons per day (gpd).
Surrogate	Compound added by the laboratory for quality control monitoring.
Data Qualifiers:	
J	Estimated value
Q	Laboratory specific qualifier - refer to case narrative or client notification form.
K	The sample was analyzed beyond the accepted holding time.
B	Analyte was also detected in the method blank.
X	Result subject to sample matrix interference. Reported detection limit has been adjusted where applicable.
Z	Defined in comments. If there are multiple comments, the "Z" may be followed by a number designation.
E	Estimated value - the analyte was detected at concentrations greater than the calibration range.
S	The matrix spike and / or matrix spike duplicate sample recovery was not within control limits.
S1	The matrix spike and / or matrix spike duplicate sample recovery was not within control limits due to matrix interference.
P	The RPD between the sample / duplicate or matrix spike / spike duplicate was not within quality control limits.
P1	The RPD between the sample / duplicate or matrix spike / spike duplicate was not within quality control limits due to sample matrix interference.
R	The surrogate was not within quality control limits.
R1	The surrogate was not within quality control limits due to matrix interference.
L	The analyte in the LCS was not within control limits.

LIMITATION OF LIABILITY - The accuracy of all analytical results is for the sample as is received by the laboratory. The integrity of the sample begins at the time it is placed in the possession of authorized Rogers and Callcott Engineers, Inc. laboratory personnel. All warranties, expressed, or implied, are disclaimed. Liability is limited to the cost of the analyses.

SAMPLE RETURN POLICY - Rogers and Callcott Engineers, Inc. reserves the right to charge a sample disposal fee or to return samples to the client.

COOLER INFORMATION

- CUSTODY SEAL NOT PRESENT OR NOT INTACT
- CHAIN OF CUSTODY NOT RECEIVED (COC)
- ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- TEMPERATURE CRITERIA NOT MET
- WET ICE RECEIVED IN COOLER

TRIP BLANK INFORMATION

- TRIP BLANK PROVIDED
- TRIP BLANK NOT PROVIDED
- TRIP BLANK NOT ON COC
- TRIP BLANK INTACT
- TRIP BLANK NOT INTACT
- RECEIVED WATER TRIP BLANK
- RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES ?

8

NUMBER OF 5035 FIELD KITS ?

8

NUMBER OF LAB FILTERED METALS ?

SUMMARY OF COMMENTS: COC has no project name

SAMPLE INFORMATION

- SAMPLE LABELS NOT PRESENT ON ALL BOTTLES
- CORRECT NUMBER OF CONTAINERS USED
- SAMPLE RECEIVED IMPROPERLY PRESERVED
- INSUFFICIENT VOLUME FOR ANALYSIS
- TIMES ON COC DOES NOT MATCH LABEL(S)
- ID'S ON COC DOES NOT MATCH LABEL(S)
- VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- UNCLEAR FILTERING INSTRUCTIONS
- UNCLEAR COMPOSITING INSTRUCTIONS
- SAMPLE CONTAINER(S) RECEIVED BROKEN
- % SOLIDS JAR NOT RECEIVED
- 5035 FIELD KIT NOT FROZEN WITHIN 48 HOUR'S
- RESIDUAL CHLORINE PRESENT

(APPLICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS)
