

# Florence County Cancer Profile

June 2022

## **What Is Cancer?**

Cancer is not one disease, but a group of diseases. For example, lung cancer is a completely different disease than colorectal cancer. All cancers have one thing in common, they can grow and spread uncontrollably if not diagnosed at an early stage and properly treated.

Cancer is caused by many things, like smoking, poor diet, and/or family history. The greatest risk factor for any cancer is increasing age. The risk of getting cancer increases with age. The risk of developing cancer differs for men and women. In the United States, one out of two men and one out of three women will have cancer in his or her lifetime.

## **What Is Cancer Incidence?**

Cancer *incidence* is a measure of how many *new cancer cases* occurred in a certain period of time. A cancer *incidence rate* tells how many cancers were diagnosed per 100,000 people in the population. (For example, a cancer incidence rate of 400 means that for every 100,000 people, 400 cancers were diagnosed).

Incidence rates can be *age-adjusted*, meaning that the age structure of the population is taken into account when rates are calculated. Adjusting for age allows us to compare rates by removing differences in the age structure among different populations. Incidence rates shown below are age-adjusted to the 2000 US standard population.

## **What Is Cancer Mortality?**

Cancer *mortality* is a measure of how many *cancer deaths* occurred in a certain period of time. A cancer *mortality rate* tells how many people died from cancer per 100,000 people in the population. (For example, a cancer mortality rate of 150 means that for every 100,000 people in the population, 150 died from cancer).

Cancer mortality rates can also be *age-adjusted*, taking into account the age structure of the population. Mortality rates shown below are age-adjusted to the 2000 US standard population.

## **Impact of Cancer: US, SC, and SC County**

The American Cancer Society (ACS) estimates that 1,918,030 new cases of cancer will be diagnosed in the United States in 2022. This translates to 5,255 new diagnoses each day. Furthermore, an estimated 609,360 people in the United States are expected to die from cancer in 2022.

In South Carolina, ACS estimates 33,440 new cases of cancer will be diagnosed in 2022 or over 92 new cancer cases diagnosed each day, while an estimated 10,850 South Carolinians will die from cancer in 2022. The four most common cancers in SC are cancers of the lung, breast (female), prostate, and colon/rectum. The four leading cancer causes of death in SC are lung, colon/rectum, breast (female), and pancreas.

Tables 1 through 4 below show the number of new cancer cases and deaths for Florence County, including age-adjusted rates for cancers in the county and for the state of SC. The last column in each table shows how the county ranks in comparison to the other 45 SC counties. A rank of 1 means that a county has the highest rate of any county, while a rank of 46 means that a county has the lowest rate of any SC county. *At this time, the most recent cancer statistics for South Carolina and the United States are for new cases diagnosed in 2019. Deaths occurring in 2019 are also used.*

**Table 1** shows 5-year cancer incidence data for Florence County and SC for all cancers by sex and race, including Florence County's rank in SC compared to all other SC counties.

Table 1. Cancer Incidence by Sex and Race, 2015-2019, Florence County and South Carolina\*

	SC	Florence County		SC rank
	5-year rate	5-year rate	new cases*	
all	444	452	780	19
male	494	545	412	10
female	407	388	368	35
white	445	443	471	27
black	433	472	302	9

\*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 2 shows 5-year cancer mortality data for Florence County and SC for all cancers by sex and race, including Florence County's rank in SC compared to all other SC counties.

Table 2. Cancer Mortality by Sex and Race, 2015-2019, Florence County and South Carolina\*

	SC	Florence County		SC rank
	5-year rate	5-year rate	lives lost*	
all	161	164	278	29
male	198	214	152	23
female	134	131	127	35
white	157	161	173	27
black	181	168	104	35

\*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 3 shows 5-year cancer incidence data for Florence County and SC for selected cancers, including Florence County's rank in SC compared to all other SC counties.

Table 3. Cancer Incidence for Selected Cancers, 2015-2019, Florence County and South Carolina\*

cancer	SC	Florence County		SC rank
	5-year rate	5-year rate	new cases*	
breast (female)	131	136	127	15
prostate (male)	113	136	109	7
lung/bronchus	61	65	117	22
colon/rectum	37	40	70	21
pancreas	14	14	25	20

\*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Statistics do not include *in situ* cancers, except for bladder. Source: SC Central Cancer Registry. ~ Statistic could not be calculated (small counts).

Table 4 shows 5-year cancer mortality data for Florence County and SC for selected cancers, including Florence County's rank in SC compared to all other SC counties.

Table 4. Cancer Mortality for Selected Cancers, 2015-2019, Florence County and South Carolina\*

cancer	SC	Florence County		SC rank
	5-year rate	5-year rate	lives lost*	
breast (female)	21	27	25	8
prostate (male)	21	21	14	22
lung/bronchus	41	41	72	29
colon/rectum	14	13	23	34
pancreas	11	11	19	33

\*Counts are annual averages based on 5 years of data. 5-year rates are per 100,000 age-adjusted to the 2000 US standard population. Sources: SC Central Cancer Registry and SC Vital Records. ~ Statistic could not be calculated (small counts).

Table 5 shows the percentage of cancers diagnosed in early and late stages of disease in Florence County and SC. Cancers diagnosed in late stages lessen the potential for successful treatment and raise the risk of premature loss of life.

Table 5. All Cancers by Stage of Diagnosis, 2015-2019, Florence County and South Carolina\*

	SC	Florence County
	Percent of all cancers	Percent of all cancers
Early Stage	47.7	47.1
Late Stage	38.4	41.5
Unknown Stage	13.9	11.4

\*Percents (proportions) shown are (rounded) based on 5 years of data. Statistics include *in situ* cancers.

Source: SC Central Cancer Registry.

**Breast Cancer in Florence County**

Among women, breast cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2015-2019. For this 5-year period, there was an annual average of 127 new female breast cancer cases diagnosed and 25 deaths from this disease.

**Prostate Cancer in Florence County**

Among men, prostate cancer was the number 1 most commonly diagnosed cancer and the number 2 leading cause of cancer death from 2015-2019. For this 5-year period, there was an annual average of 109 new prostate cancer cases diagnosed and 14 deaths from this disease.

**Lung Cancer in Florence County**

Lung Cancer was the number 2 most commonly diagnosed cancer and the number 1 leading cause of cancer death from 2015-2019. For this 5-year period, there was an annual average of 117 new lung cancer cases diagnosed and 72 deaths from this disease.

**Colorectal Cancer in Florence County**

Colorectal cancer was the number 4 most commonly diagnosed cancer and the number 3 leading cause of cancer death from 2015-2019. For this 5-year period, there was an annual average of 70 new colorectal cancer cases diagnosed and 23 deaths from this disease.

**Pancreatic Cancer in Florence County**

Pancreatic cancer was the number 9 most commonly diagnosed cancer and the number 4 leading cause of cancer death from 2015-2019. For this 5-year period, there was an annual

average of 25 new pancreatic cancer cases diagnosed and 19 deaths from this disease.

**Screening**

Men and women should speak with their doctor about the pros and cons of screening and to determine their level of risk.

The Best Chance Network (BCN) provides breast cancer screenings (ages 30-64) and cervical cancer screenings (ages 21-64) for women with incomes at or below 250% of the federal poverty level, screening thousands of women each year. For more information see: <http://www.scdhec.gov/Health/DiseasesandConditions/Cancer/FreeCancerScreenings/>

**Notes:** Data are subject to change as data sets are updated. Rates are per 100,000 and age-adjusted to the 2000 U.S. standard population. Statistics do not include *in situ* cancers, except for bladder. The following suppression rules may have been applied to the data in the text and tables above: counts of 1-4 are recorded as less than 5; counts of 5-9 are rounded to 10. Rates based on counts fewer than 16 are suppressed (~).
